introduction

Background

MCR was commissioned by the Office of the Inspector-General Emergency Management (IGEM) in March 2015 to undertake a survey of Banana Shire residents. Results from the survey, and other investigations by IGEM, will inform the formal review into the February flooding of Callide Creek.

Objectives

The key objectives of the research were to:

- understand community engagement with general Disaster Management Arrangements, including:
 - awareness of arrangements, perceptions of the organisation(s) perceived to be responsible for disaster management and awareness and participation in community and public events about Disaster Management Arrangements;
- measure community awareness and understanding of flood risks, including:
 - the sources consulted for flood risk information and confidence in dealing with flooding events;
- understand the personal impacts experienced as a result of the recent event, including:
 - the proportion who needed to evacuate, perceptions about the potential impact that an early release of water from the Callide Dam would have had and observations about the difference between the recent and past flood events;
- understand the sources of information consulted by community members in the lead up to and during the recent event, including:
 - the warnings received, the perceived effectiveness of communication channels for distributing warnings and community suggestions for improving emergency warnings generally.

This report details the findings of the study.

summary

MCR was commissioned by the Office of the Inspector-General Emergency Management (IGEM) to undertake a telephone survey of n=406 residents living within the Callide Creek catchment area. The survey was undertaken between the 14th and 26th April 2015. A summary of results is presented below.

Community engagement

Knowledge of Disaster Management Arrangements

45% of respondents in our survey report having a good (36%) or extensive (9%) knowledge of the Disaster Management Arrangements in the Banana Shire. A similar proportion (47%) rates their knowledge as limited while 8% say they have no knowledge of such arrangements.

More than eight in ten respondents nominate the Banana Shire Council (85%) as being the entity responsible for disaster management generally. The State Emergency Service (46%) is the next most often mentioned group followed by Queensland Fire and Emergency Services (27%) or the Queensland Police Service (26%).

Six in ten respondents (61%) had heard of the Local Disaster Management Group (LDMG) prior to being surveyed. 33% of respondents believe they would know how to contact the LDMG if they needed to.

Perceptions of the role of the LDMG

The LDMG is primarily associated with coordination tasks in the lead-up to and during an event and secondarily with planning responsibilities:

- 33% (of all respondents) say the LDMG is responsible for coordinating and organising emergency services during an emergency
- 29% consider the LDMG's role to be related to coordinating and organising recovery or clean-up efforts after an emergency
- 26% nominate the broadcasting of warnings in the lead-up to and during emergencies as LDMG's role
- 17% consider the LDMG's role to be to plan for emergencies.

Public events related to Disaster Management Arrangements

Prior to our survey, four in ten respondents (40%) had heard about community events, public meetings or presentations about Disaster Management Arrangements in their local area. 5% of all respondents report attending a community event, public meeting or presentation about Disaster Management Arrangements in the past few years.

Flood risk
Enquiries made about flood risk
Four in ten (39%) respondents report they have enquired about the risks of flood to their property in the past few years. Most enquiries appear to have been informal in nature with 32% sourcing information from individuals such as family, friends or neighbours. After this, residents are most likely to have consulted Banana Shire Council (10%), SunWater (4%) or Queensland Fire and Emergency Services (4%).

57% of those who consulted Banana Shire Council about flood risk say they are satisfied with the information provided by the council (16% very satisfied, 41% quite satisfied). 10% of those who enquired with SunWater about flood risk consider the information provided to be satisfactory (all of whom were quite satisfied– this result should be treated with caution given the small sample size).

Confidence in one's understanding of flood risks

91% of respondents say they are confident in their understanding of the flood risk to them or their property (61% very confident, 30% quite confident). Reported confidence is lower than average (91%) among:

- those who had been impacted by a flood prior to the 2015 flood (84%)
- those living outside the Biloela township (86%) – particularly those in Valentine Plains (79%)
- those who reported being emotionally impacted by the February event (69%)
- those who had house/other property/agricultural property damaged or destroyed during the February event (82%)
- those who evacuated their home during the February event (57%)
- females (88%).

89% of survey respondents express confidence in regards to being prepared for and knowing how to respond to flooding events in the future (49% very confident, 40% quite confident).

- 39% of respondents say they are aware of how and where to seek information from river gauges within the Callide Valley.

Impact of February 2015 event

The majority of survey respondents (92%) report experiencing at least some personal impact as a result of the flooding event in February 2015. The most widespread impacts mentioned (without prompting) are power outages (68%) and telecommunications outages (51%).

Common impacts mentioned in relation to property include:

- damage to property (other than home or agricultural property) (25%)
- fencing damage (21%)
- loss of fencing (19%)
- paddock quality impacts (14%)
- damage to home (13%)
- destruction or loss of other property (11%).

Impacts related to home/other property damage/agricultural property damage are more likely than average (47%) to be found among those:

- living outside the Biloela township (70%)
- who evacuated their home (96%)
- involved in primary production (88%).

8% of survey respondents report having had to evacuate their home as a result of the recent flood event.

Perceptions of the impact of an early release of water from the Callide Dam

22% of survey respondents believe an early release of water from the Callide Dam leading up to the flooding event would have improved the situation for them and their property. 1% of respondents consider an early release would have worsened their situation. 70% of respondents consider an early release would have made no difference in their situation, while 5% are unsure.

Those living outside the Biloela township (32%) are more likely than average (23%) to believe an early release would have improved their situation. This is especially the case among those living in the combined areas of Jambin/Argoon/ Goovigen/Orange Creek/Greycliffe (39%), Mt Murchison/Dakenba/Callide (52%) or Smoky Creek (56%).

Other sub-groups more likely than average (23%) to believe an early release from the Callide Dam would have improved their situation are those:

- who feel they have been emotionally impacted by the event (55%)
- who evacuated their home (76%)
- involved in primary production (32%).

By far the most commonly perceived difference an early release of water could have made is that the amount of water arriving at once would have been reduced and the damage therefore lessened (74%).

Being on high ground (35%) or living in a flood free zone (25%) are the main reasons for believing an early release from Callide Dam would not have made a difference to the impacts personally experienced during the February event. Not being impacted by Callide Dam waters is mentioned by 16%. 11% consider that there was so much water, an early release would not have made a difference.

Previous flood experience

39% of survey respondents report having been impacted by flood waters at their current address before the February event. Of those with prior flood experience, the majority (82%) believe there was a difference between the impact experienced as a result of February 2015 event and earlier floods.

The main difference perceived was that the volume of water, the speed with which it came and the amount of flooding was greater in February 2015 than during previous flooding events (50%). 14% say there was more damage to property or infrastructure this time compared to previous floods, 13% noticed more debris/damage to crops or land this time.

Positive differences noted include a perception that they were more prepared in February 2015 than in previous floods (10%), that there was less water or flooding this time (6%) or that there was less damage or debris left over this time (5%).

Information sources used in February 2015

Two key sources of information were relied upon in the lead-up to the February event; the Bureau of Meteorology website (73%) or family/friends/neighbours (67%). During the event reliance on family, friends or neighbours was maintained (71%) while use of the Bureau of Meteorology website decreased to 46%.

46% consulted ABC News prior to the event, with a similar proportion (40%) doing so during the event.

Other key information sources that were more commonly referred to in the lead-up to, rather than during the event are:

- Banana Shire Council/LDMG (43% lead-up, 26% during)
- Landline or mobile phone (38% lead-up, 22% during)
- Other radio station (18% lead-up, 12% during)
- Other website (18% lead-up, 5% during).

Text message warnings

23% of all survey respondents received (and retained) the text message: Flood Warning from Banana LDMG. Water releasing Callide Dam. Threat to Life and Property. Jambin & Goovigen leave area now or seek higher ground. Listen to radio. Those living in Biloela township (23%) are equally as likely as those living outside this area (23%) to have received this message.

Other messages receiving 1% or fewer mentions are detailed under section 5.0 of this report.

Perceived effectiveness of communication channels for receiving warnings

Respondents were asked to rate the effectiveness of a range of communication channels in delivering warnings during times of disaster.

Calls to mobile telephone (81%), text messages to mobile telephone (79%) or radio broadcasts (77%) are the methods most likely to be considered effective. Seven in ten respondents rate a phone call to a landline (70%) or television broadcasts (70%) as effective. 58% consider Facebook to be effective while 56% rate the websites of relevant authorities as an effective way of delivering warnings during disasters. Twitter perceived as effective by 14% of respondents.

Respondent suggestions for improvement emergency warnings generally

When asked for suggestions about how to improve emergency warnings generally, the most common response given was to provide warnings to residents earlier (from any source or organisation) (25%). After this, residents called for more geographically specific warnings (14%), more text messages (13%) or more telephone calls to residents (10%).

method

Method	Computer assisted telephone interviewing (CATI), where trained interviewers read the pre-scripted survey from a computer screen and enter the responses directly into the computer at the time of interviewing.
Fieldwork partner	MCR's fieldwork partner Q&A Market Research conducted the fieldwork and data analysis tasks. Q&A Market Research has ISO 20252 quality accreditation.
Target respondent	Residents in the defined catchment area (one person (18+ years) per household).
Universe	<p>The survey universe was made up of the following areas:</p> <ul style="list-style-type: none"> • Argoon • Biloela (respondents self-selected as either living with the township or within areas surrounding the township) • Callide • Dakenba • Dululu • Goovigen • Greycliffe • Jambin • Mt/Mount Murchison • Orange Creek • Prospect • Smoky/Creek • Thangool • Valentine Plains • Wowan
Sample source	n=406 interviews were completed: n=182 within Biloela township and n=224 outside this area. See appendix B for a full sample composition.
Weighting	A two phased weighting approach was applied to take into account the age and gender profile of residents in the survey region and the number of households in the survey region.
Questionnaire	See appendix A for the questionnaire.
Fieldwork statistics	See appendix C for fieldwork statistics and dates.
Pilot	A survey pilot (a small number of interviews) and subsequent review was conducted to check for respondent comprehension and questionnaire flow.
Data analysis	<p>MCR designed a detailed analysis specification for Q&A Market Research to produce data tables. The statistical processing software SurveyCraft was used to produce these data tables.</p> <p>Results were subject to significance testing to indicate if a result is statistically significant (i.e. if a result is statistically different from the average or from another sub-group).</p>

Publication of Information

MCR is a member of AMSRO and abides by the AMSRS Code of Professional Behaviour. The Code of Professional Behaviour can be downloaded at www.amsrs.com.au. Under the Code of Professional Behaviour – information about Client's businesses, their commissioned market research data and findings remain confidential to the clients unless both clients and researchers agree the details of any publications.

MCR has ISO 20252 quality assurance accreditation.

Therefore no warranty can be given that the information included will be predictive of a desired outcome.

findings

1.0 Community engagement

1.1 Knowledge of Disaster Management Arrangements

How would you rate your knowledge of the Disaster Management Arrangements in the Banana Shire?

45% of respondents in our survey report having a good (36%) or extensive (9%) knowledge of the Disaster Management Arrangements in the Banana Shire. A similar proportion (47%) rates their knowledge as limited while 8% say they have no knowledge of such arrangements.

1.1.1 Sub-group differences

Extensive knowledge of the arrangements is more likely to be found among those living in the township of Biloela (12%), compared to those living outside this area (6%).

Those who evacuated their home during the February 2015 event (63%) are more likely than those who did not (45%) to consider their knowledge to be limited.

1.2

Organisation perceived to be responsible for Disaster Management Arrangements

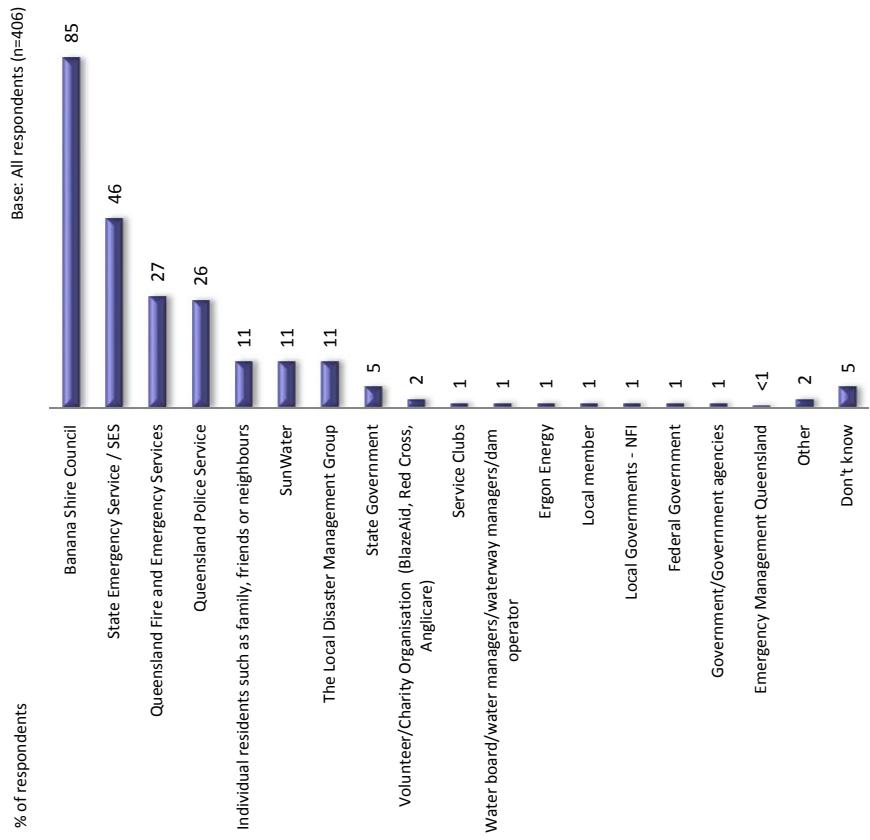

More than eight in ten respondents nominate the Banana Shire Council (85%) as being the entity responsible for disaster management generally. The State Emergency Service (46%) is the next most often mentioned group followed by Queensland Fire and Emergency Services (27%) or the Queensland Police Service (26%).

The adjacent chart lists other organisations mentioned by respondents.

1.2.1 Sub-group differences

Primary producers (20%) are more likely than average (11%) to nominate individual residents such as family, friends or neighbours as being responsible for disaster management.

1.4 Awareness of responsibilities of Local Disaster or Emergency Management Group

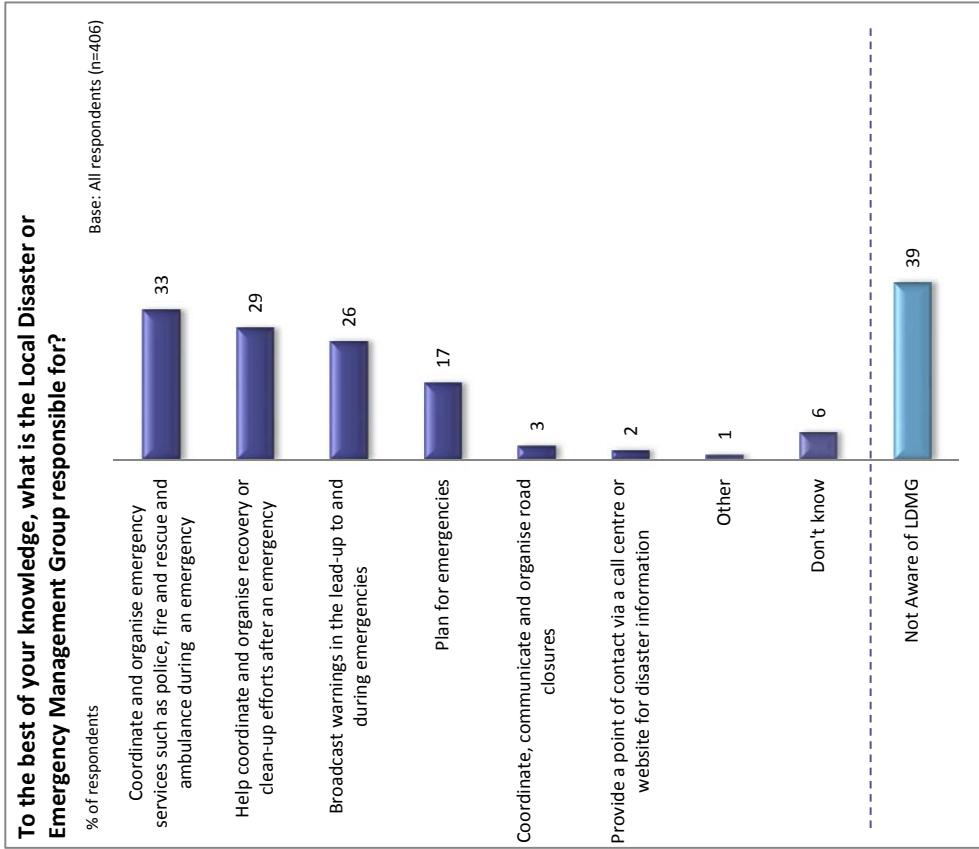

The LDMG is primarily associated with coordination tasks in the lead-up to and during an event and secondarily with planning responsibilities:

- 33% (of respondents) say the LDMG is responsible for coordinating and organising emergency services during an emergency
- 29% consider the LDMG's role to be related to coordinating and organising recovery or clean-up efforts after an emergency
- 26% nominate the broadcasting of warnings in the lead-up to and during emergencies as the LDMG's role
- 17% consider the LDMG's role to be to plan for emergencies.

1.4.1 Sub-group differences

Respondents living within the Biloela township (22%) are more likely than respondents elsewhere in the survey region (12%) to consider the LDMG is responsible for planning for emergencies.

Broadcasting warnings in the lead-up to and during emergencies is an area of responsibility more likely to be mentioned by those aged under 45 years (32%) than those aged 45 years or older (20%).

Q2b To the best of your knowledge, what is the Local Disaster or Emergency Management Group responsible for? What do they do? [Unprompted MR]

1.6 Awareness of community events about disaster management

Prior to our survey, four in ten respondents (40%) had heard about community events, public meetings or presentations about Disaster Management Arrangements in their local area.

1.6.1 Sub-group differences

Those living in the combined area of Valentine Plains/Prospect/Thangool (31%) are significantly less likely to be aware of Disaster Management Arrangements compared with the average (40%).

1.7 Attendance at community events

Across all survey respondents, 5% report attending a community event, public meeting or presentation about Disaster Management Arrangements in the past few years.

The adjacent chart illustrates the various organisations recalled as being present at these events, Banana Shire Council (4%) being the most common.

1.7.1 Sub-group differences

Those who evacuated their home in the February 2015 event (16%) are more likely than those who did not (5%) to have attended a community event.

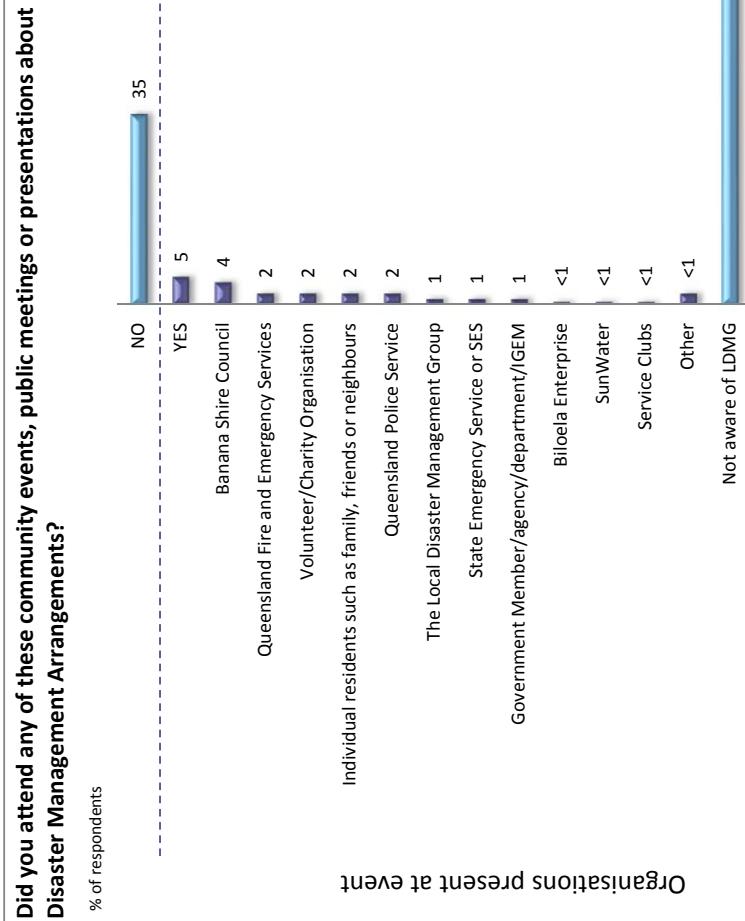

Table: Q4 Did you attend any of these community events, public meetings or presentations about Disaster Management arrangements? [Unprompted MR]

2.0 Flood Risk

2.1 Enquiries made about flood risk

Four in ten (39%) respondents report they have enquired about the risks of flood to their property in the past few years.

Most enquiries appear to have been informal in nature with 32% sourcing information from individuals such as family, friends or neighbours.

After this, residents are most likely to have consulted Banana Shire Council (10%), SunWater (4%) or Queensland Fire and Emergency Services (4%).

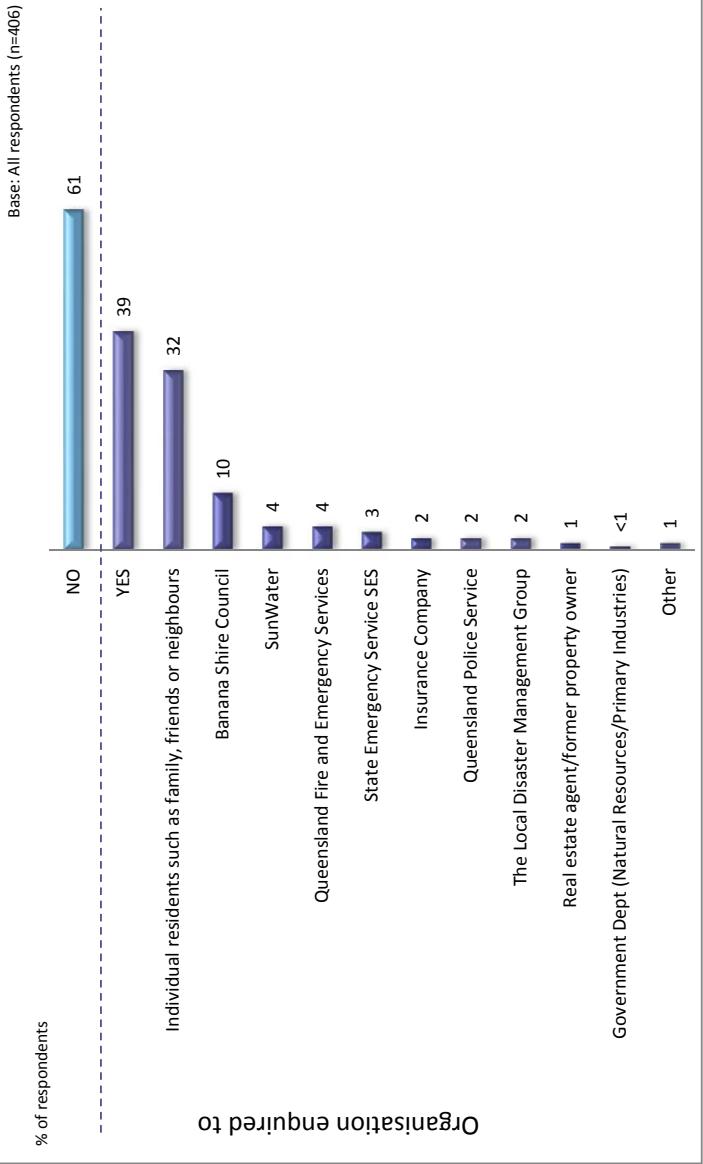

Other organisations respondents accessed for flood risk information are detailed in the adjacent chart.

2.1.1 Sub-group differences

Sub-groups more likely than average (39%) to have made enquiries about flood risk in the past few years are those:

- living outside the Biloela township (45%)
- who evacuated their home during the February event (72%)
- aged under 45 years (49%).

Have you enquired about the risks of flood to your property from any of the following organisations in the past few years?

Q9 Have you enquired about the risks of floods to your property from any of the following organisations in the past few years?

2.3

Confidence in personal understanding of flood risk

91% of respondents say they are confident in their understanding of the flood risk to them or their property (61% very confident, 30% quite confident).

2.3.1 Sub-group differences

Confidence is higher than average (91%) among:

- those living within the Biloela township (95%)
- those who were not impacted by the February flood event (100%)
- those who did not evacuate their home during the February event (94%)
- males (94%).

Reported confidence is lower than average (91%) among:

- those who had been impacted by a flood prior to the 2015 flood (85%)
- those living outside the Biloela township (86%) – particularly those in Valentine Plains (79%)
- those who reported being emotionally impacted by the February event (69%)
- those who had house/other property/agricultural property damaged or destroyed during the February event (82%)
- those who evacuated their home during the February event (57%)
- females (88%).

2.5 Awareness of how and where to seek information from river gauges

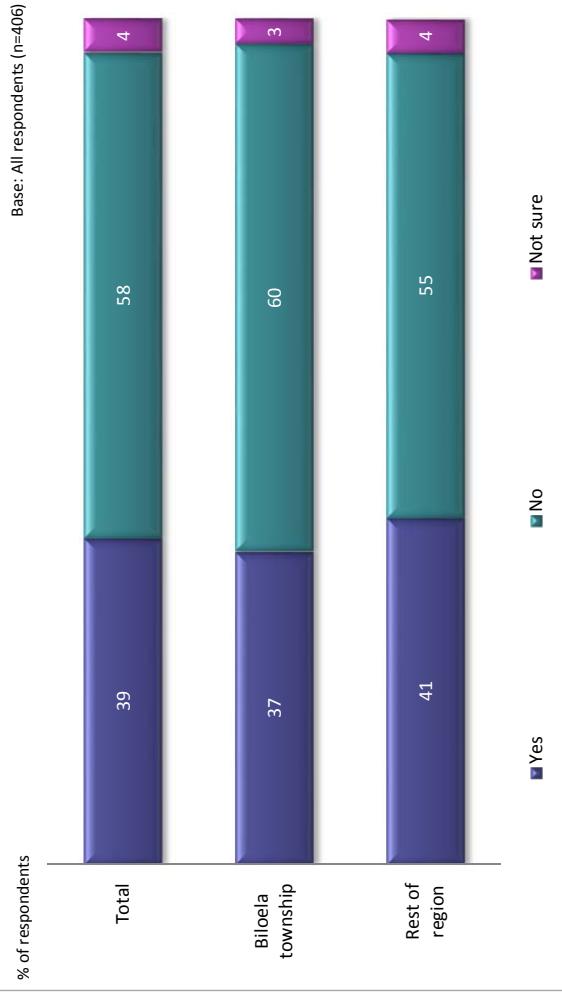

39% of respondents say they are aware of how and where to seek information from river gauges within the Callide Valley.

2.5.1 Sub-group differences

Awareness is higher than average (39%) among:

- those who experienced house/other property/agricultural property damage in the February event (47%)
- those involved in primary production (53%)
- males (45%)
- those from the combined areas of Jambin/Argoogen/Gooogen/Orange Creek/Greycliffe (69%).

Are you aware of how and where to seek information from river gauges within the Callide Valley?

Q13 Are you aware of how and where to seek information from river gauges within the Callide Valley?

3.0 Impact of event

3.1 Personal impact of flooding event

The majority of survey respondents (92%) report experiencing at least some personal impact as a result of the flooding event in February 2015.

The most widespread impacts mentioned (without prompting) are power outages (68%) and telecommunications outages (51%).

Common mentions related to property include:

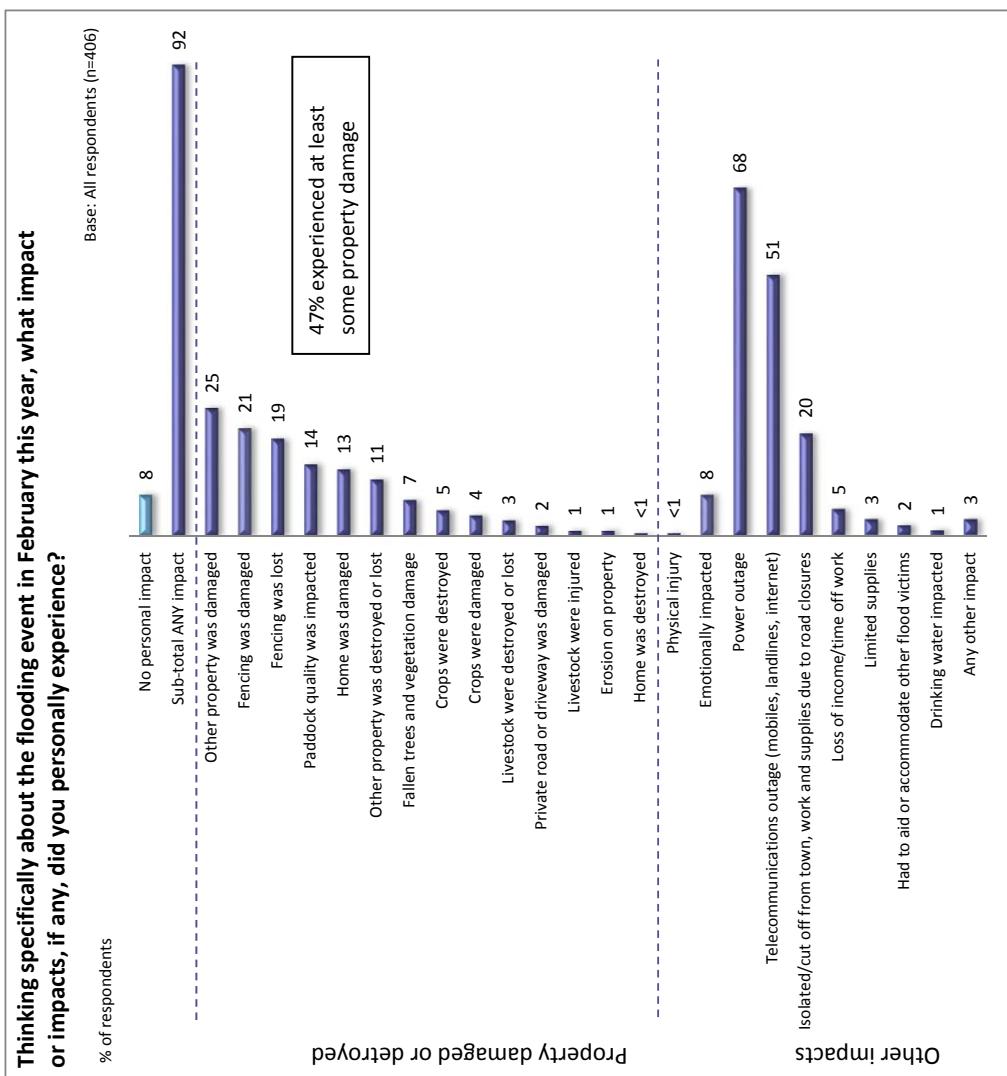

- damage to property (other than home or agricultural property) (25%)
- fencing damage (21%)
- loss of fencing (19%)
- paddock quality impacts (14%)
- damage to home (13%)
- destruction or loss of other property (11%).

See adjacent chart for more impacts.

3.1.1 Sub-group differences

Impacts related to home or other property damage/agricultural property damage are more likely than average (47%) to be found among those:

- living outside the Biloela township (70%)
- who evacuated their home (96%)
- involved in primary production (88%).

Q14 Thinking specifically now about the flooding event in February this year, what impact or impacts, if any, did you personally experience? [UNPROMPTED MR]

3.3 Perceptions about the impacts of an early release of water from the Callide Dam

23% of survey respondents believe an early release of water from the Callide Dam leading up to the flooding event would have improved the situation for them and their property. 1% of respondents consider an early release would have worsened their situation.

70% of respondents consider an early release would have made no difference in their situation, while 5% are unsure.

3.3.1 Sub-group differences

Those living outside the Biloela township (32%) are more likely than average (23%) to believe an early release would have improved their situation. This is especially the case among those living in the combined areas of Jambin/Argoon/ Goovigen/Orange Creek/Greycliffe (39%).

Other sub-groups more likely than average (23%) to believe an early release from the Callide Dam would have improved their situation are those:

- who feel they have been emotionally impacted by the event (55%)
- who evacuated their home (76%)
- involved in primary production (32%).

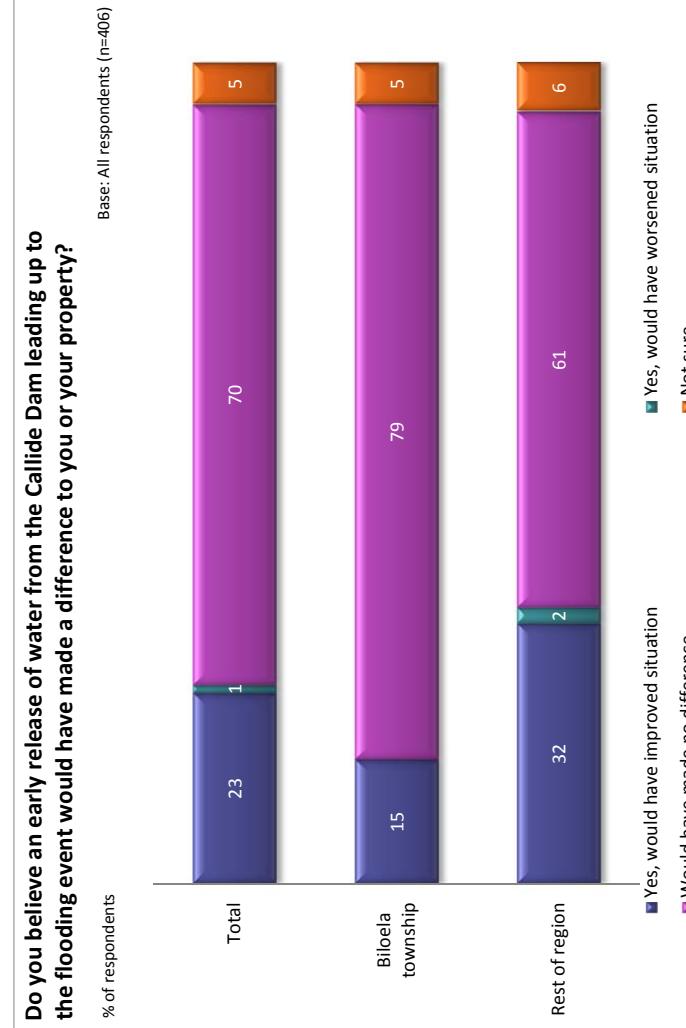

Table: Q16 Do you believe an early release of water from the Callide Dam leading up to the flooding event would have made a difference to you or your property?

Bold figures are significantly different to the average at at least the 95% confidence level.

3.4 Perceived difference an early release of water would have made

By far the most commonly perceived difference an early release of water could have made is that the amount of water arriving at once would have been reduced and the damage therefore lessened (74%).

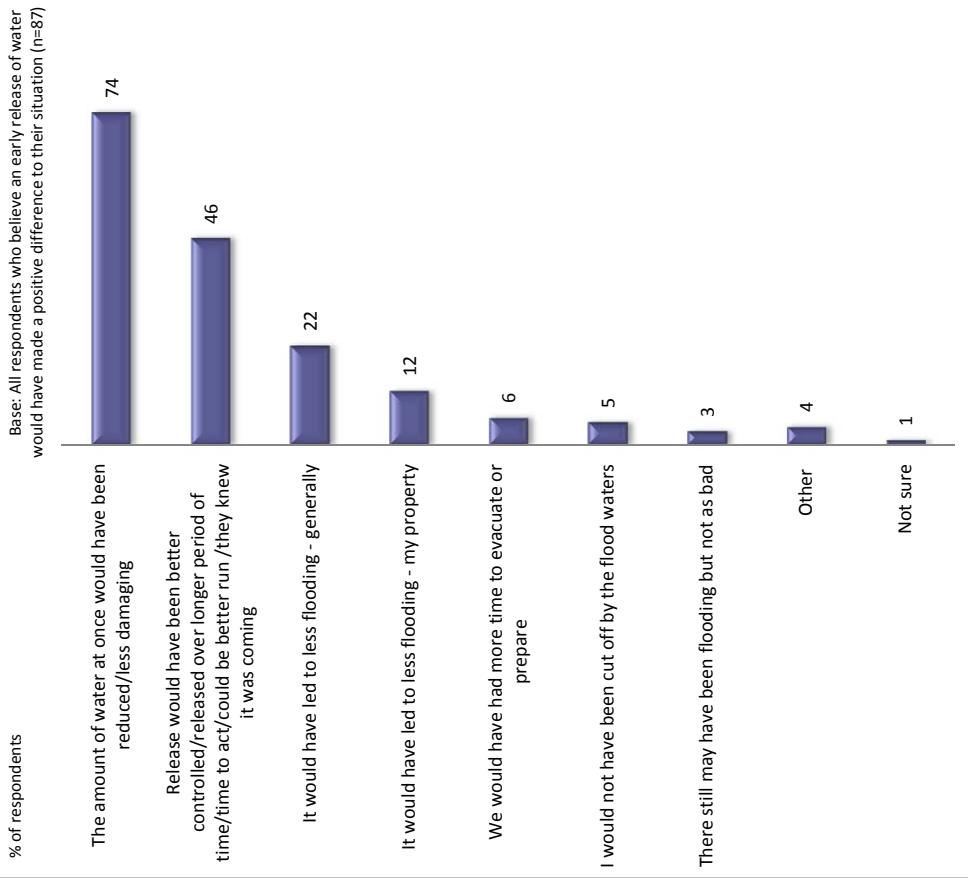

One in two (46%) say an earlier release would have allowed for the release to have been better controlled and better communicated to residents (that authorities knew the water was coming).

After this mentions of less flooding generally (22%) or less flooding to the respondent's property (12%) are the next most common responses.

3.4.1 Sub-group differences

No significant sub-group differences are noted on this issue.

What difference would an early release of water have made?

Q16a What difference would this have made? [Unprompted MR]

3.4.2

Perceived difference among those who believe an early release would have worsened their situation

Three respondents (1%) believe an early release of water from the Callide Dam would have worsened their situation. The following are the verbatim comments from respondents (each bullet point represents n=1 respondent):

- I believe it would have put more water down my end. We live right on the bottom end of Callide Creek, there are seven major creeks that feed the water that comes past our place and a bit further down there are two other major rivers from Mt Morgan way. If Callide Creek is pre-charged that's just going to back water up and add to the water. Releasing water from the dam is just going to add to the problem down the line. If they let water out early the creeks down around us will all peak at the same time.
- It would have made things a lot worse than it was. If they had released it early we would have all been flooded worse.
- I think if they had released the water earlier we would have been flooded worse here as we're on the Dee River and it would have backed up there.

Table: Q16a What difference would this have made? [Unprompted MR]

3.5 Reasons for perceiving that an early release of water would NOT have made a difference

Being on high ground (35%) or living in a flood free zone (25%) are the main reasons for believing an early release from Callide Dam would not have made a difference to the impacts personally experienced during the February event. Not being impacted by Callide Dam waters is mentioned by 16%.

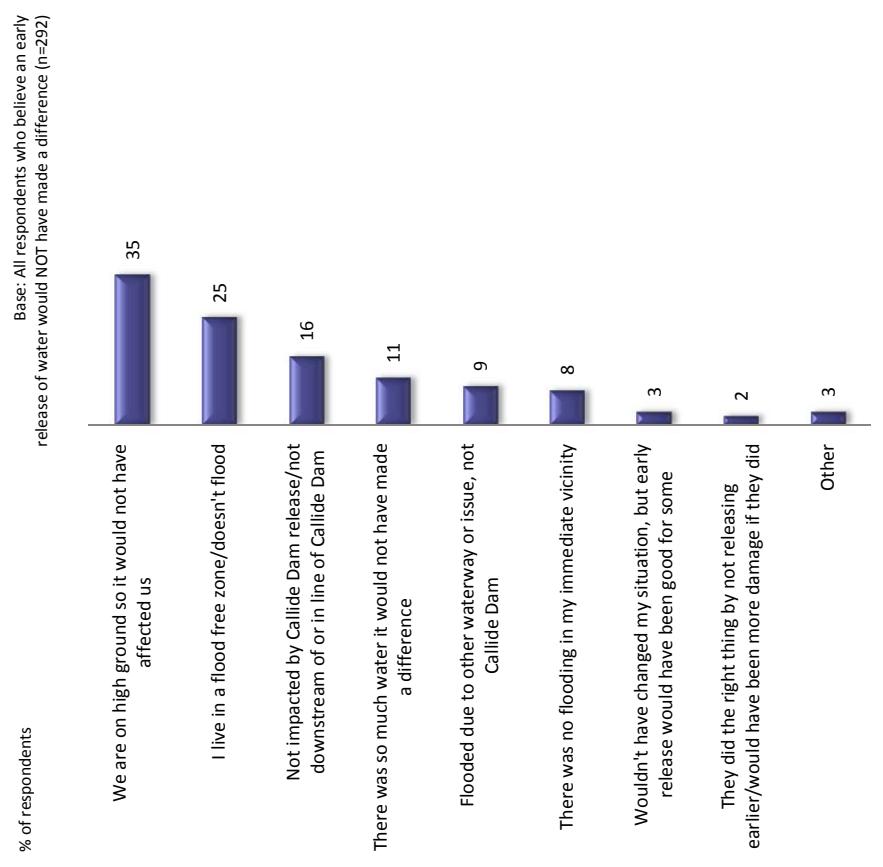

11% consider that there was so much water, an early release would not have made a difference.

Other responses are illustrated in the adjacent chart.

3.5.1 Sub-group differences

No significant sub-group differences are noted on this issue.

3.6 Previous flood impact

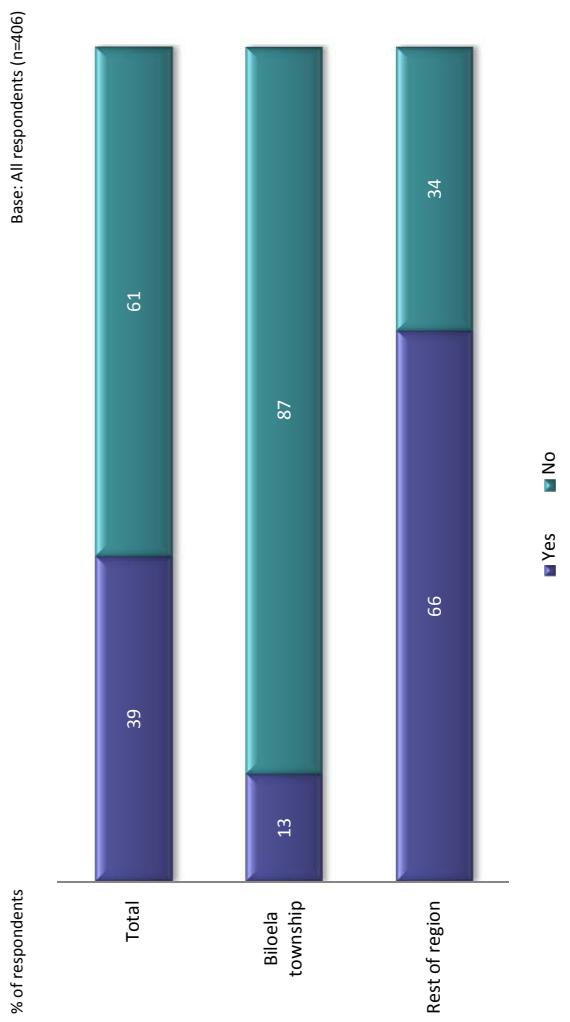

39% of survey respondents report having been impacted by flood waters at their current address before the February event.

3.6.1 Sub-group differences

Prior flooding impacts are most commonly found among those living outside the Biloela township (66%, compared to township residents 13%).

Those who have been emotionally impacted by the February event (64%) or primary producers (77%) are more likely than average (39%) to have been impacted by flood waters before 2015.

Had you ever been impacted by flood waters at your current address before the February event?

4.0 Information sources

4.1 Information sources used

Two key sources of information were relied upon in the lead-up to the February event; the Bureau of Meteorology website (73%) or family/friends/neighbours (67%). During the event reliance on family, friends or neighbours was maintained (71%) while use of the Bureau of Meteorology website decreased to 46%.

46% consulted ABC News prior to the event, with a similar proportion (40%) doing so during the event.

Other information sources were more commonly referred to in the lead-up to, rather than during the event. See adjacent chart for more details.

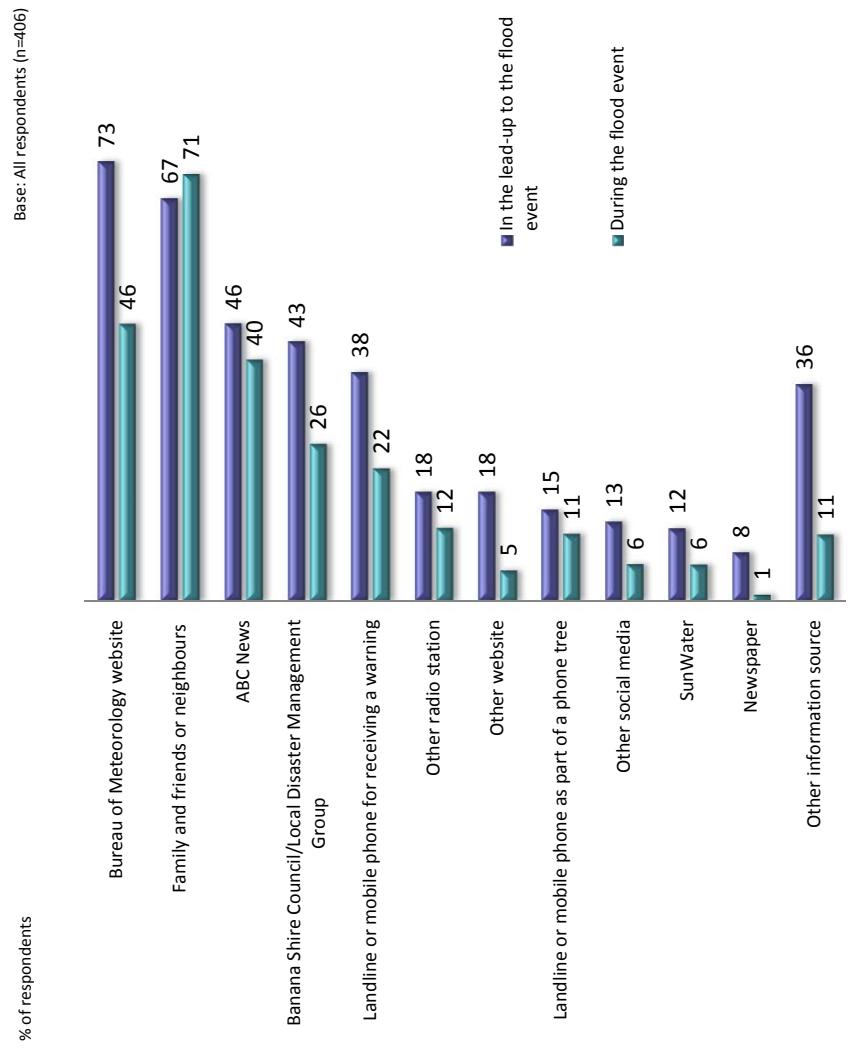

4.1.1 Sub-group differences

Those who evacuated their home during the February event (37%) were more likely than average (12%) to have used **SunWater** for advice in the lead-up to the event (in particular by phoning them). They were also more likely than average to have consulted the **official Banana Shire Council Facebook page** (33%, versus 17% average) or **Bureau of Meteorology website** (88%, versus 73% average) in the lead-up to the flooding event.

Primary producers were more likely than average to have used information from **SunWater** (18%, versus 12%), **ABC News** (60%, versus 46%) or a **local phone tree** (28%, versus 15%) in the lead-up to the event.

The tables on pages 66-69 highlight these and other sub-group differences.

Information sources used in the lead-up to and during the recent flood event

Q18a In the lead-up to the recent flood event which, if any, of the following sources of information did you use?
Q18b And during the recent flood event which, if any, of the following sources of information did you use?

4.1.2

Information channel by source

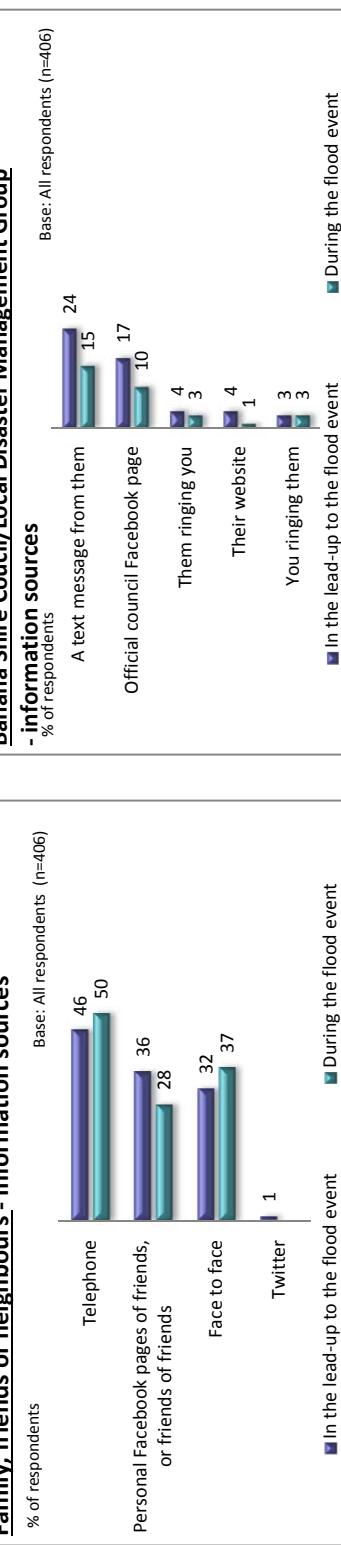

Data presented in each of the following charts is expressed as a percentage of all respondents.

One in two respondents in the survey region (46% lead-up/50% during) consulted **family, friends or neighbours** via telephone, while one in three used personal Facebook pages (36% lead-up, 28% during) or face to face discussions with family, friends or neighbours (32% lead-up, 37% during).

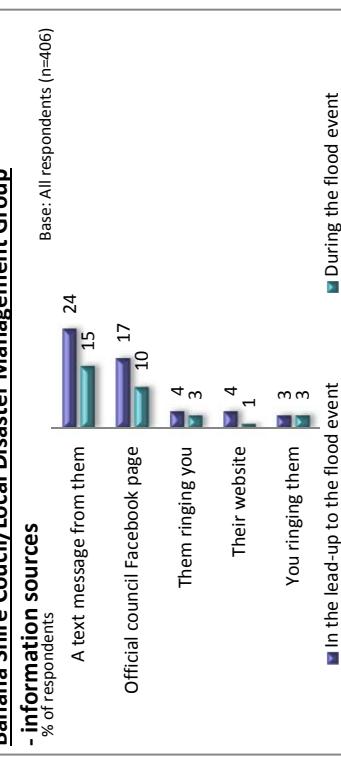

Communications with **Banana Shire Council** or the **LDMG** were most likely to have occurred via a text message (24% lead-up, 15% during), or through the official council Facebook page (17% lead-up, 10% during).

Local radio (41% lead-up, 37% during) was the most common way people sourced information from **ABC News**. A text message from **SunWater** (6% lead-up, 4% during) was the most common information channel used between residents and SunWater.

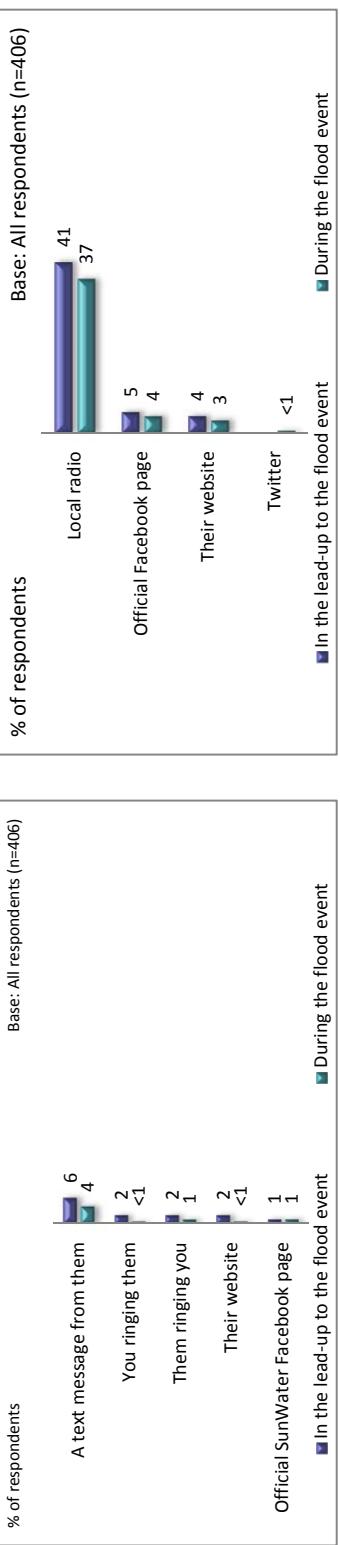

Family, friends or neighbours - information sources

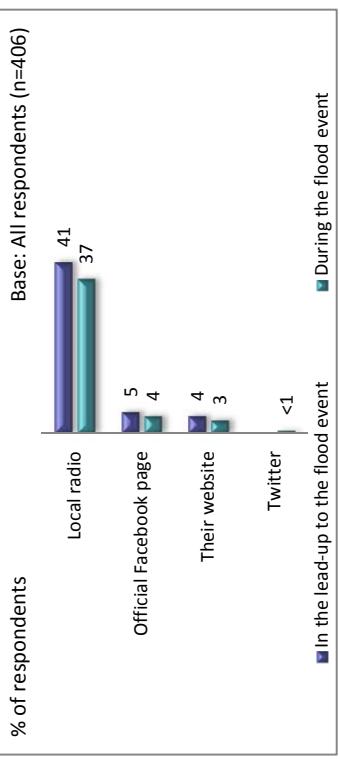

Banana Shire Council/Local Disaster Management Group - information sources

SunWater - information sources

ABC News - information sources

5.0 Text message warnings

To facilitate accurate respondent recall of text messages received, wherever possible, respondents were asked to read out the message(s) directly from their mobile phone to the interviewer.

Prior to checking their mobile phone, 158 respondents stated that they had received a text message from either Banana Shire Council (127 people) and/or SunWater (34 people). Of those, 74 people believed they had the message(s) retained on their mobile phone. These respondents were then asked to read-out the message(s) and the time it was received to the interviewer.

Those who had not retained the message were asked more general questions (see section 5.4).

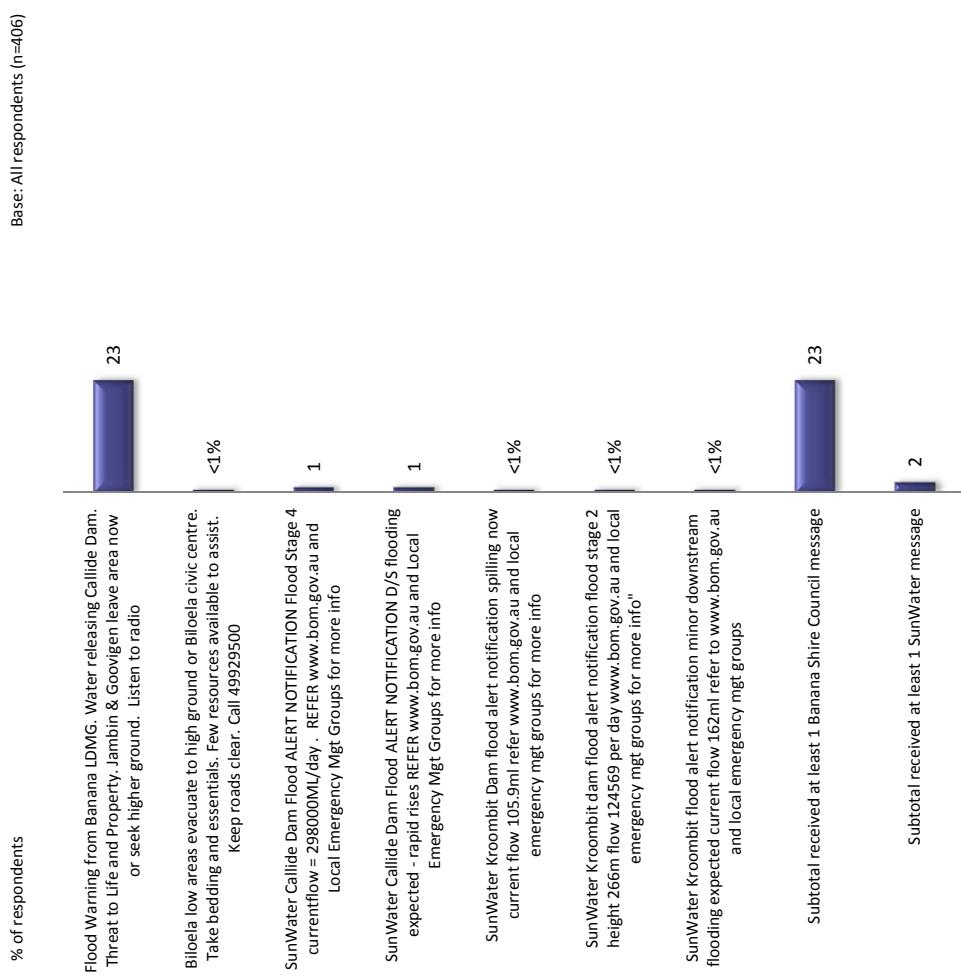

The survey only measured text messages received from Banana Shire Council or SunWater.

5.1 Warnings received via text message – those with retained message(s) on mobile phone

23% of all survey respondents received (and retained) the text message: Flood Warning from Banana LDMG. Water releasing Callide Dam. Threat to Life and Property. Jambin & Goovigen leave area now or seek higher ground. Listen to radio. Those living in Biloela township (23%) are equally as likely as those living outside this area (23%) to have received this message.

Other messages receive 1% or fewer mentions – see adjacent chart.

Text message received and retained on mobile phone

Q21c/x Can you read to me the message exactly?

Table: Q21c/x Can you read to me the message exactly?

5.3

Reasons why message was hard to understand - those with retained message(s) on mobile phone

Those who rated a message as 'hard' to understand were asked to describe the reason for this. The following are the verbatim comments from respondents.
(Each bullet point represents n=1 respondent)

- Flood Warning from Banana LD/MG. Water releasing Callide Dam. Threat to Life and Property. Jambin & Goovigen leave area now or seek higher ground. Listen to radio
- It didn't indicate the area that we were in - our house was flooded.
- It didn't refer to our area, we were already flooded.
- Did not tell me where to go, just to get out.
- They told us to evacuate to Jambin which is ridiculous because it's downstream. By the time we got the message we were already flooded in.

SunWater Callide Dam Flood ALERT NOTIFICATION Flood Stage 4 current flow = 298000ML/day. REFER www.bom.gov.au and Local Emergency Mgt Groups for more info

- Didn't understand what stage 4 meant. I didn't have the number for the Local Emergency Management Group. (The message) referred to (a) website and if you haven't got a computer you can't find further information.
- When I received the message you were already surrounded by water and could not get out as we were flooded in. (I) tried to get the family out but could not get them out as each road we tried to take was covered with water.

SunWater Callide Dam Flood ALERT NOTIFICATION D/S flooding expected - rapid rises

REFER www.bom.gov.au and Local Emergency Mgt Groups for more info

- I tried to get onto the (web)site that they had sent through with the message but could not get on, none of us could get on (to the website) from around here.
- It didn't specifically say gates had opened. It didn't say to evacuate. I had to refer to the BOM website to see what it meant and there was no information. It didn't refer to our area - we were already flooded.

5.4.2

Reasons messages were hard to understand – text messages received but not retained on mobile phone

Those who rated a message as ‘hard’ to understand were asked to describe the reason for this. The following are the verbatim comments from respondents.
(Each bullet point represents n=1 respondent)

Responses in relation to messages from **Banana Shire Council / LDMG** (each mentioned by one person):

- Message was not clear as it didn't refer to my local area so I had to guess if it really meant us or really just the areas mentioned.
- (Message was) incorrect because we were told to evacuate when we did not need to, we were told to go to the Jambin school but the roads were all cut and there was no way you could have done that anyway.
- The text said anyone near the Callide River and the river runs about 500 metres from our place but we're on a hill so it wasn't easy to understand if we would be affected or not.
- Although (we were) in the direct path of the water release (we) didn't know it applied to us as the areas mentioned don't apply to us, so (we) didn't know what it meant for us.

Responses in relation to messages from **SunWater** (each mentioned by one person):

- Unless you understood what the technical specs meant you had no concept of the severity of it.
- Mainly because I was still half asleep - I just sort of thought “what the hell was going on?”.
- Wasn't clear as to what was happening. Didn't seem to include my area and (I wasn't sure) the information was relevant.
- (The message came) 5 minutes until (we had to) immediately evacuate premises. Where do I go? How do I get there? (It) wouldn't have mattered even if we up and ran, (the) water would have got you if (you were) outside in the open. Sending a message like that - it was like dropping a bomb on someone who didn't know what was going on. (I) thought message was for Jambin people - I'm in Biloela - some people got it some people didn't - not all the right people got it. The message just wasn't clear in its direction (and there was) not enough time to act on message.

Q23b *Why were the messages hard to understand? [Banana Shire Council or the Local Disaster Management Group]*
Q24b *Why were the messages hard to understand? [SunWater]*

6.0 Perceived effectiveness of communication channels for receiving warnings

Respondents were asked to rate the effectiveness of a range of communication channels in delivering warnings during times of disaster.

Calls to mobile telephone (81%), text messages to mobile telephone (79%) or radio broadcasts (77%) are the methods most likely to be considered effective.

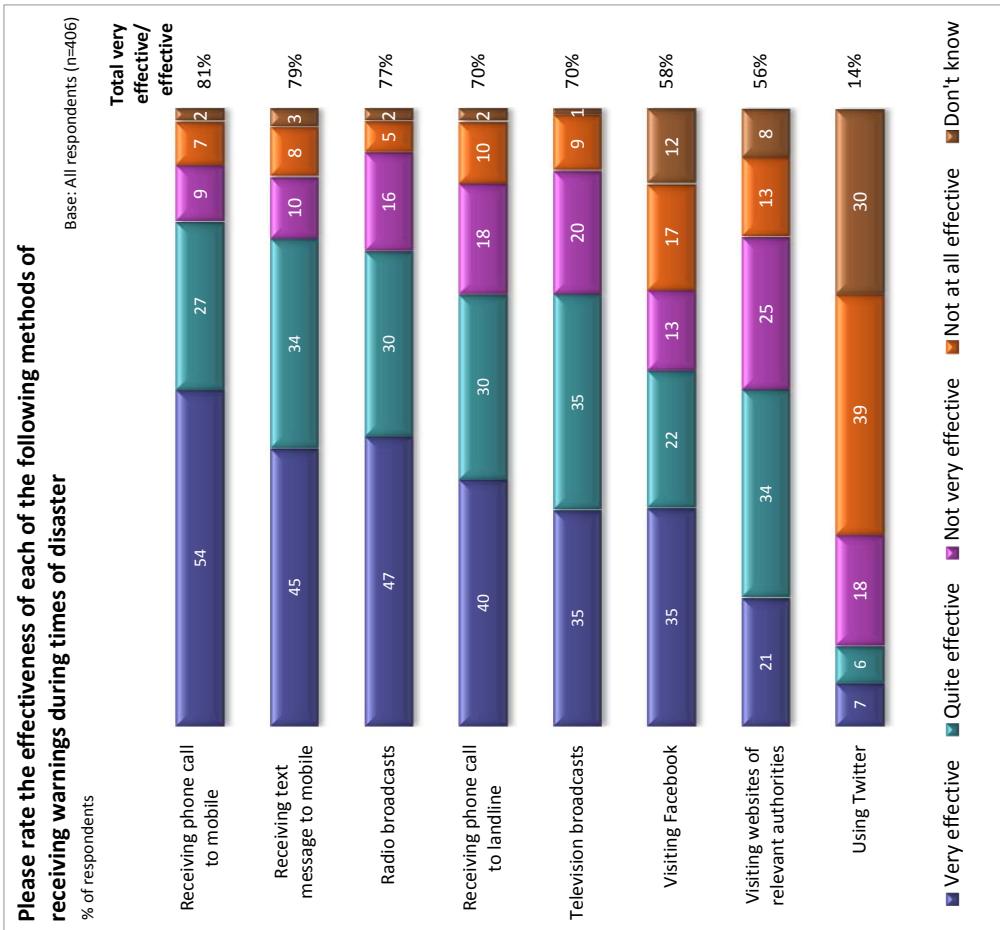

Seven in ten respondents rate a phone call to a landline (70%) or television broadcasts (70%) as effective. 58% consider Facebook to be effective, while 56% rate the websites of relevant authorities as an effective way of delivering warnings during disasters. Twitter is perceived as effective by 14% of respondents.

6.0.1 Sub-group differences

Sub-groups less likely than average (81%) to rate a phone call to a mobile phone as effective are:

- those living outside the Biloela township (77%) – especially those living in the combined areas of Dululu/Wowan/Smoky Creek (53%)
- primary producers (72%)
- those aged 45 years or older (72%).

Those living outside the Biloela township are also less likely than average to rate Facebook (54%, versus 58% average), websites of relevant authorities (53%, versus 55% average) or Twitter (10%, versus 14% average) as effective communication channels for distributing warnings during times of disaster.

7.0 Suggestions for improving emergency warnings

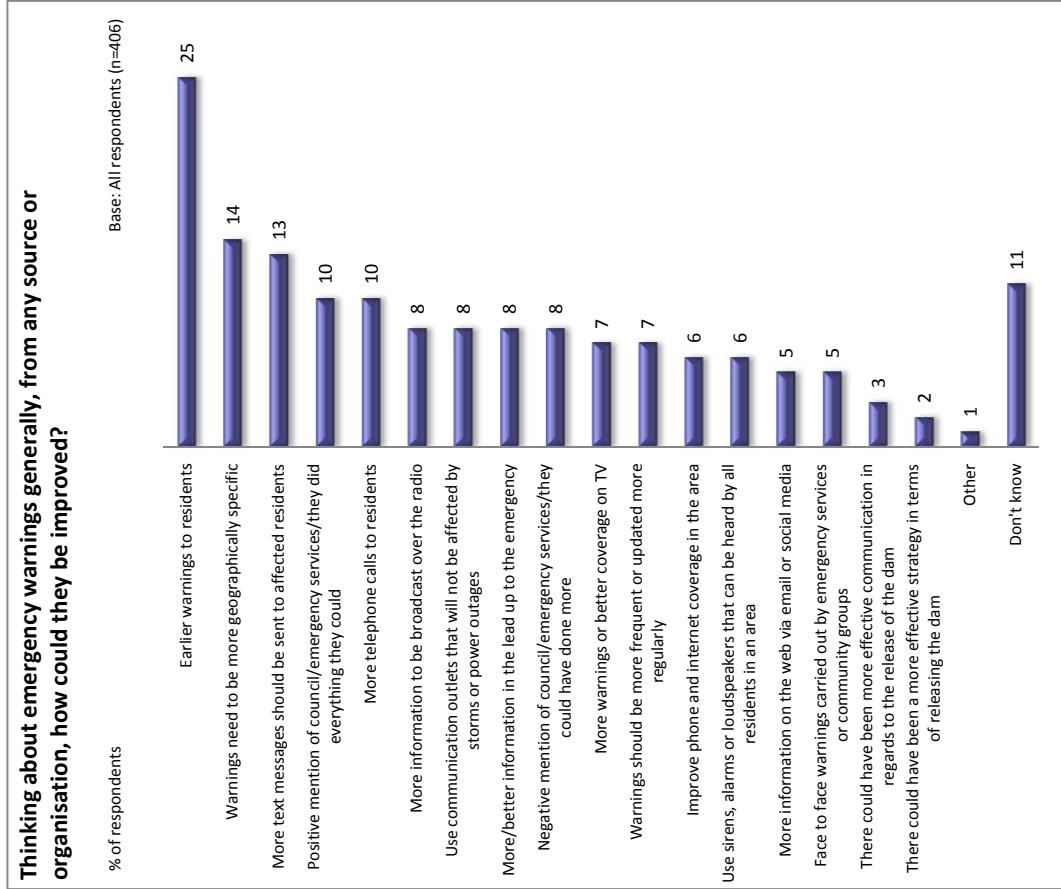

When asked for suggestions about how to improve emergency warnings generally, the most common response given was to provide warnings to residents earlier (from any source or organisation) (25%). After this, residents called for more geographically specific warnings (14%), more text messages (13%) or more telephone calls to residents (10%).

7.0.1 Sub-group differences

Those who evacuated their home in the February 2015 event are more likely than average to suggest the following improvements:

- Warnings should be more geographically specific (22%, versus 14% average)
- More information should be provided in the lead-up to an emergency (15%, versus 8% average)
- More effective communication should be provided in regards to the release of the dam (5%, versus 3% average).

Those who have been emotionally impacted by the February 2015 event (14%) are more likely than average (6%) to suggest improvements in phone and internet coverage be made in the area.

Q26 Thinking about emergency warnings generally, from any source or organisation, how could they be improved? How else? [Unprompted MRF]

Table: Q26 Thinking about emergency warnings generally, from any source or organisation, how could they be improved? How else? [Unprompted MR]

8.0 Companies used for landline, mobile and internet

Telstra is by far the most common brand used for landline telephone (86%), mobile telephone (86%) and internet (65%) by those residing in the survey region. This is particularly the case among those living outside Biloela township for landline service (90% Telstra).

Other brands each receive 5% or fewer mentions.

8.1

Connection difficulties

65% of residents experienced connection difficulties with their landline service with most of these difficulties being experienced during the event (50%) or after the event (60%), as opposed to in the lead-up to the event (7%).

Results are similar when analysing mobile phone connection difficulties – 62% experienced difficulties, again most occurred during the event (44%) or after the flood (57%), rather than in the lead-up to the event (8%).

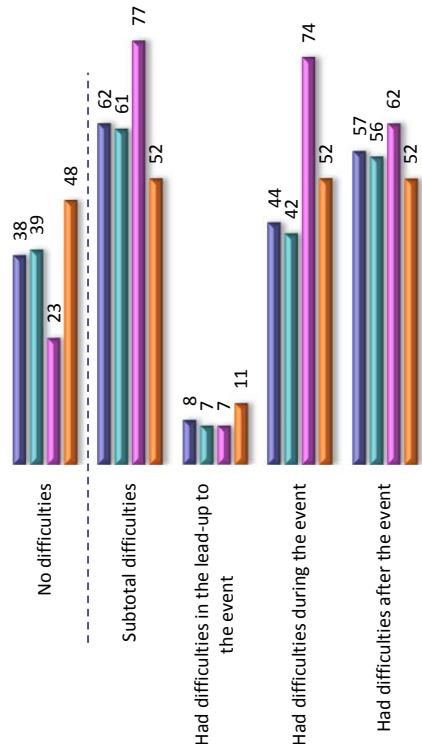

Cell sizes are too small to declare differences between providers.

8.1.1 Sub-group differences

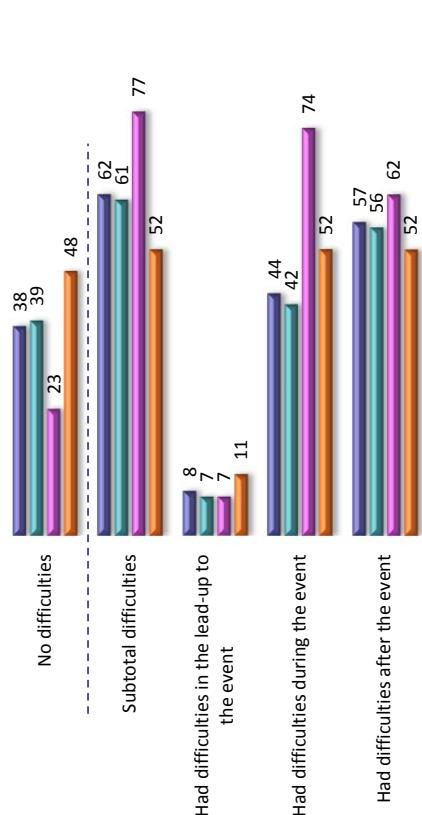

Reported connection difficulties are more widespread among those living outside the Biloela township (75% landline, 67% mobile difficulties) than those living within the town (56% landline, 57% mobile difficulties).

appendices

appendix a – questionnaire

INTRODUCTION / SCREENERS

Good morning/afternoon/evening. This is <name> calling from Q&A Market Research on behalf of the Office of the Inspector-General Emergency Management. The Inspector-General has asked us to undertake a survey of residents living in the Callide Valley to gather community feedback in relation to disaster management. The survey will take approximately 20 minutes and your answers will remain anonymous. Would you be able to help us out?

If no, ask: Would there be another adult in your household who would be interested in providing feedback?

If agreed to interview:

Thank-you. Throughout the interview I'll be following a standard questionnaire to keep the interview as brief as possible and ensure that questions are consistent from interview to interview. Because I'm following the questionnaire, it may sometimes seem like I'm being too formal or mechanical. Please be assured your opinions are very important to us and I want to be sure I record them accurately.

Firstly I need to ask a few demographic type questions to ensure we're talking with a good cross section of the Callide Valley Community.

AA Just confirming, do you live in or very close to {computer insert locality}?

1. Biloela, {interviewer classify as...}
 - a. Within the actual township
 - b. Or in areas surrounding the town of Biloela
2. Argoon
3. Callide
4. Dakenba
5. Dululu
6. Goovigen
7. Greycliffe
8. Jambin
9. Mt/Mount Murchison
10. Orange Creek
11. Prospect
12. Smoky/Smoky Creek
13. Thangool
14. Valentine Plains
15. Wowan

CC Are you a primary producer? ...

1. NO
2. Yes:
If yes ask Is that... READ OUT
3. Livestock
4. Cropping such as cotton, grain or hay
5. Horticulture
6. All of the above

DD Record gender

1. Male
2. Female

DD And are you aged 18 years or older?

1. Yes
2. No TERMINATE

EE What is your postcode?

Direct numeric entry: _____

READ OUT:

This survey is about disaster management arrangements. Disaster management arrangements refer to the arrangements for preventing or reducing the impact of, preparing for, responding to and recovering from a disaster.

The first section of this survey asks about your general experience with disaster management arrangements in your area. Later in the survey there will be questions specifically about the most recent flooding event that occurred in February this year.

COMMUNITY ENGAGEMENT

Q1 Firstly, how would you rate your knowledge of the Disaster Management Arrangements in the Banana Shire? Would it be...? (READ OUT) (SR)

1. Extensive
2. Good
3. Limited
4. Or do you have no knowledge at all
5. Don't know (do not read out)

Q2 Who do you believe is responsible for Disaster Management generally in Banana Shire? (UNPROMPTED) (MR)

1. Banana Shire Council
2. The Local Disaster Management Group
3. SunWater
4. Queensland Police Service
5. Queensland Fire and Emergency Services
6. State Emergency Service / SES
7. Individual residents such as family, friends or neighbours
8. Service Clubs
9. Other (please specify) _____
10. Don't know

Q2a Before today had you heard of the Local Disaster Management Group? It may also be known as the Local Emergency Management Group?

1. Yes
2. No

Ask those aware of LDMG code 1 at Q2a

Q2b To the best of your knowledge, what is the Local Disaster or Emergency Management Group responsible for? What do they do? UNPROMPTED MR

1. DON'T KNOW
2. Plan for emergencies
3. Coordinate and organise emergency services such as police, fire and rescue and ambulance during an emergency
4. Broadcast warnings in the lead-up to and during emergencies
5. Help coordinate and organise recovery or clean-up efforts after an emergency
6. Other (specify) _____

Q2c If you needed to contact your Local Disaster or Emergency Management Group, would you know how to do this?

1. Yes
2. No

Ask all

Q3 In the past few years, had you heard about any community events, public meetings or presentations about Disaster Management arrangements in your local area?

1. Yes
2. No

Ask those aware of community events code 1 at Q3

Q4 Did you attend any of these community events, public meetings or presentations about Disaster Management arrangements?

1. NO
2. YES – if yes ask:
Which organisation or organisations were present at such events? (UNPROMPTED) (MR)
3. Banana Shire Council
4. The Local Disaster Management Group
5. SunWater
6. Queensland Police Service
7. Queensland Fire and Emergency Services
8. State Emergency Service or SES
9. Individual residents such as family, friends or neighbours
10. Service Clubs
11. Other (please specify) _____

There is no Q5, Q6, Q7, Q8

FLOOD RISKS

Ask all

Q9 Have you enquired about the risks of flood to your property from any of the following organisations in the past few years? READ OUT MR

1. Banana Shire Council
2. The Local Disaster Management Group
3. SunWater
4. Queensland Police Service
5. Queensland Fire and Emergency Services
6. State Emergency Service SES
7. Individual residents such as family, friends or neighbours
8. Other (please specify) _____
9. NONE

If enquired to Banana Shire Council or SunWater – LOOP FOR THESE TWO ONLY

Q10 How satisfied were you with the information provided by {Banana Shire Council} {SunWater} at that time?

1. Very satisfied
2. Quite satisfied
3. Not very satisfied
4. Not at all satisfied
5. Don't know (do not read)

Ask all

Q11 How confident are you about your understanding of the flood risk to you and your property? Are you...
READ OUT SR

1. Very confident
2. Quite confident
3. Not very confident
4. Not at all confident
5. Don't know (do not read out)

Q12 How confident are you in regards to being prepared for and knowing how to respond to flooding events in the future? Are you... READ OUT SR

1. Very confident
2. Quite confident
3. Not very confident
4. Not at all confident
5. Don't know (do not read out)

Q13 Are you aware of how and where to seek information from river gauges within the Callide Valley?

1. Yes
2. No
3. Not sure

IMPACT OF EVENT

Q14 Thinking specifically now about the **flooding event** in February this year, what impact or impacts, if any, did you personally experience? UNPROMPTED MR

1. NONE
2. Physical injury
3. Emotionally impacted
4. Home was damaged
5. Home was destroyed
6. Other property was damaged
7. Other property was destroyed or lost
8. Crops were damaged
9. Crops were destroyed
10. Livestock were injured
11. Livestock were destroyed or lost
12. Fencing was damaged
13. Fencing was lost
14. Paddock quality was impacted
15. Telecommunications outage (mobiles, landlines, internet)
16. Power outage
17. Any other impact (specify) _____

Q15 Was there a need for you to evacuate your home as a result of the recent flood event?

1. Yes
2. No

There is no Q15a

Ask all

Q16 Do you believe an early release of water from the Callide Dam leading up to the flooding event would have made a difference to you or your property?

1. Yes
2. No
3. Not sure

Ask yes code 1 at Q16

Q16a What difference would this have made?

Ask no code 2 at Q15

Q16b Why would this have made no difference?

UNPROMPTED MR

Ask all

Q17 Had you ever been impacted by flood waters at your current address before the February event?

1. Yes
2. No

Ask those who have been previously impacted by flood waters code 1 at Q17

Q17a What, if anything, has been different in terms of the impact of this flood and previous floods?

1. No difference
2. Difference: _____

INFORMATION & WARNINGS

ASK ALL

Q18a In the lead-up to the recent flood event which, if any, of the following sources of information did you use?

Q18b And during the recent flood event which, if any, of the following sources of information did you use?

READ OUT MR

- a) Family friends or neighbours
 - 1. No
 - 2. Yes – was that via (MR)
 - 1. Face to face
 - 2. Telephone
 - 3. Personal Facebook pages of friends or friends of friends
 - 4. Twitter
- b) Banana Shire Council/Local Disaster Management Group
 - 1. No
 - 2. Yes – was that via (MR)
 - 1. You ringing them
 - 2. Them ringing you
 - 3. A text message from them
 - 4. Official council Facebook page
 - 5. Twitter
 - 6. Their website
- c) SunWater
 - 1. No
 - 2. Yes – was that via (MR)
 - 1. You ringing them
 - 2. Them ringing you
 - 3. A text message from them

- i) Newspaper (specify) _____
- j) Other social media (specify) _____
- k) Other website (specify) _____
- l) Other information source (specify) _____

TEXT MESSAGE WARNINGS

Ask all

Q19 In the lead-up to or during the recent flooding event, did you receive any WARNINGS via TEXT MESSAGE from either the **Banana Shire Council or the Local Disaster Management Group or SunWater?** READ OUT MR

1. Banana Shire Council or the Local Disaster Management Group
2. SunWater
3. None of the above

Ask those who received text warnings – code 1 or 2 at Q19

Q19a I'd now like to ask some specific questions about the text messages you received. Did you save any or all of those messages/are they still on your phone?

1. Yes
2. No SKIP to Q23

READ TO THOSE BEING INTERVIEWED ON LANDLINE

Q20 Do you have your mobile phone close by to refer to?

If no: Are you able to access your mobile phone while we talk? If not, I can hang up and call you back once you have access to your phone.

READ TO THOSE BEING INTERVIEWED ON MOBILE

Q20 I'd like you to refer to the warning text messages on your mobile phone while we talk – do you have another phone number (landline or mobile) that I could call back on so that you can look at your mobile while we talk?

If yes, gather details and phone back, confirm phone number

If no, say

I can hang up and give you some time to write down the text messages and the date and time each came in and then call you back? If yes gather details and phone back as appropriate

FOR EACH TEXT MESSAGE – REPEAT Q21 a-h

Q21 Please note it's very important that I accurately record each message and the date and time it came in. Let's go back to the very first warning you received – can you locate that warning?

Interviewer note: if there are multiple messages on the one date, record each separately by time

a) Who was it from?

1. Banana Shire Council OR the Local Disaster or Emergency Management group
2. SunWater

b) What date and time did it come in?

If necessary – this information should appear above or beside the text message

1. Thursday 19th February, time __:__ am/pm
2. Friday 20th February , time __:__ am/pm
3. Saturday 21st February, time __:__ am/pm
4. Sunday 22nd February , time __:__ am/pm
5. Other (specify) _____

c) Can you please read to me the message exactly:

Banana Shire Council or LDMG

1. Flood Warning from Banana LDMG. Water releasing Callide Dam. Threat to Life and Property. Jambin & Goovigen leave area now or seek higher ground. Listen to radio
2. OTHER - Record verbatim: _____

SunWater

3. SunWater Callide Dam Flood ALERT NOTIFICATION: D/S flooding expected – rapid rises REFER www.bom.gov.au and Local Emergency Mgt Groups for more info
4. SunWater Callide Dam Flood ALERT NOTIFICATION: Flood Stage 4 current flow = 298000ML/day . REFER www.bom.gov.au and Local Emergency Mgt Groups for more info
5. OTHER - Record verbatim: _____

d) Overall, was the warning message easy or hard to understand?

1. Easy
2. Hard

If hard to understand, ask

e) Why was the message hard to understand?

Record verbatim: _____

Ask all message recipients

f) Did the message refer you somewhere else for more information?

1. Yes
2. No

- g) If yes at (f) - Did you go to this source for more information?
1. Yes
 2. No
- h) If yes at (f) - Was the message about where to go for more information specific enough?
1. Yes
 2. No

OK, let's go on to the next text message now *Go back to Q21 (a)*

If no more messages skip to Q25

If there were more messages but they were deleted – probe with:

- Q22 Were the deleted messages from...
1. Banana Shire Council or the Local Disaster Management Group
 2. SunWater
 3. None of the above SKIP TO Q25

Ask code 1 at Q19 OR code 1 at Q23X

- Q23 Thinking about the warning message or messages from the **Banana Shire Council or the Local Disaster Management Group**

- a) Generally, were the warning messages easy or hard to understand?
1. Easy
 2. Hard

If hard ask

- b) Why were the messages hard to understand?

Record verbatim: _____

Ask code 2 at Q19 OR code 2 at Q23X

- Q24 Thinking about the warning message or messages from **SunWater...**

- a) Generally, were the warning messages easy or hard to understand?
1. Easy
 2. Hard

If hard ask

- b) Why were the messages hard to understand?

Record verbatim: _____

Ask all

Q25 Please rate the effectiveness of each of the following methods of receiving warnings during times of disaster. The first method is a, the next method is a ...

ROTATE

- a) Phone call to landline
- b) Phone call to mobile
- c) Text message to mobile
- d) The websites of relevant authorities
- e) Television broadcasts
- f) Radio broadcasts
- g) Facebook
- h) Twitter

Would you rate this as ... READ OUT

- 1. Very effective
- 2. Quite effective
- 3. Not very effective
- 4. Not at all effective
- 5. Don't know (do not read out)

Q26 Thinking about emergency warnings generally, from any source or organisation, how could they be improved? How else? UNPROMPTED MR

Ask all

D1 Which of the following do you have (or will have once it is repaired)?

1. Landline
2. Mobile phone
3. Internet connection

Ask those who have relevant service

D2a Which company do you use for your landline telephone?

D2b Which company do you use for your mobile phone?

D2c Which company do you use for your internet?

If use more than one, ask for main brand

1. Telstra
2. Optus
3. TPG
4. iiNet
5. Virgin
6. Vodafone
7. Dodo
8. Other (specify)
9. Don't know

D2aa In the lead-up to and during the recent flood event did you have any problems getting a connection on your landline telephone... READ OUT

D2bb In the lead-up to and during the recent flood event did you have any problems getting a connection on your mobile phone... READ OUT

Interviewer note – problems are regarding connection issues not flat batteries or lost phones

1. NO
2. Yes, Was that... *specify MR*
 - a. In the lead-up to the event
 - b. During the event
 - c. After the event

Ask all

D3 To which of the following age categories do you belong? Are you under or over 40 years of age?
READ OUT SR

1. 18 to 24 years
2. 25 to 29 years
3. 30 to 34 years
4. 35 to 39 years

5. 40 to 44 years
6. 45 to 49 years
7. 50 to 54 years
8. 55 to 59 years
9. 60 to 64 years
10. 65 years or over

D3a Which of the following categories, best describes your household type? READ OUT SR

1. Lone person household
2. Couple with no children
3. Single or couple with dependent children (mostly aged under 13 years)
4. Single or couple with dependent children (mostly aged over 13 years)
5. Single or couple with adult children (aged over 18 years)
6. Couple whose children have left the family home
7. Group household (non related individuals)
8. Other/specify _____

D4 Do you have any people aged 75 years or older living in your household?

1. Yes
2. No

D5 How long have you lived in the Callide Valley area?

Direct numeric entry _____ (years) _____ (months)

D6 Are you an active member of...? READ OUT MR

1. Service club
2. SES
3. Rural fire brigade
4. Church groups
5. Sporting groups

D7 Which of the following describes your work status? READ OUT SR

1. You work full time
2. You work part time
3. You do home duties
4. You are a student
5. You are currently in between jobs
6. You are on a pension/benefit
7. Other /specify

Display if codes 1 or 2 at D7

D8 What is your occupation?

Record verbatim and then code as follows:

1. "On-site" or "hands-on" job without formal qualifications or with a basic licence (*e.g. general labourer, fruit picker, manufacturing or factory workers, truck/fork-lift driver, machine operator*).
2. "On-site" or "hands-on" job, but with a formal qualification (TAFE, completed apprenticeship, certificate etc) (*e.g. qualified trades people such as electricians/plumbers/carpenters/sign-writers, mechanics etc) as well as some small goods or services industries (e.g. butcher, baker, hairdresser, florist etc). Also includes defence force members (non-officer level)*).
3. Office, or non-manual job, not necessarily requiring qualifications (*e.g. hospitality, retail, administration, sales representative, office clerk etc.*)
4. A professional job, requiring a completed formal degree (*e.g. accountant, lawyer, engineer, scientist, architect, marketing/advertising, most managers/senior managers etc), plus teachers and most health professionals (nurses, physiotherapists, dentists, naturopaths etc)*.
5. Other / type in.....

D9 Apart from the recent flood event, have you ever been impacted by another disaster?

1. NO
2. Yes,
if yes ask: What type of disaster have you been impacted by before? MR
3. Storm damage
4. Flood
5. Cyclone
6. Earthquake
7. Fire
8. Drought
9. Health epidemic
10. Failure of essential services such as water or power
11. Other (specify _____)

appendix d – ‘other’ responses

Q2 – Who do you believe is responsible for Disaster Management generally in the Banana Shire?	
Weather bureau	1
The army if necessary	1
Everyone is represented within Disaster Management Group/has representatives	1
A lot of it seems to be directed from Brisbane or groups within Brisbane	1
Coordinating team/they have a committee	1
Locals, community officials, people who own businesses and have some sort of status in the town are kept in the know	1
Mt Morgan mines, Telstra and Optus telecommunications	1
Local schools	1
ABC radio	1

Q2b – To the best of your knowledge, what is the Local Disaster or Emergency Management Group responsible for? What do they do?	
Liaising with other communities who want to give to the disaster-affected community	1
Open evacuation centres	1
Check on whether or not it is safe for people to build their houses in certain areas	1
Coordinate with SunWater to find out what they are doing with the flood gates	1
Review their performance in previous emergencies	1
Help prevent damage	1
Apply for grants after disasters	1

Q4a – Did you attend any of these community events, public events or presentations about Disaster Management arrangements? If yes, which organisations were present at such events?	
Community health organisations	1
Local business people	1
Authority figures within the community/EBAI/group within Biloela	1
School	1
Cannot remember	1
Local Area Coordinator	1

Q9 – Have you enquired about the risks of flood to your property from any of the following organisations in the past few years?	
Have looked at topographical maps	1
Local map	1
Community recovery group	1

D2a – Which company do you use for your landline telephone?	
Club Telco	1
Total Telecom	1
AAPT	1
Telecom	1
Liacom/backpackers mobile service	1
Foxtel	1
Teleos	1
Spriall	1
Telus	1

D2b – Which company do you use for your mobile phone?	
Liacom/backpackers mobile service	1

'Other' responses (cont'd)

D2c – Which company do you use for your internet?	
Club Telco	2
Netspace	1
CQNET	1
Satelite through clearworks	1
AAPT	1
Harvoursat	1
Skymesh	1
ANT	1
Reachnet	1
Ipstar	2
AA Net	1
Foxtel	1
Bordernet	1

D3a – Which of the following categories best describes your household type?	
My brother and myself	1
Refused/85 year old female	1
3 adult siblings/all single	1

D9 – Apart from the recent flood event, have you ever been impacted by another disaster?	
Mouse plague in the township	1
Blizzards	1
Possibly a car accident	1

Q16a – What difference would this [early water release] have made?	
I don't believe they should have released the water early as if the cyclone had turned around they would have been left with an empty dam	1
Only half the people received texts	1

Q16b – Why would this [early water release] have made no difference?	
Should have released the dam water earlier	1
They should not have released the dam	1
If they had done a little bit more homework they could have evacuated people during the day instead of night time/the risk that people were exposed to could have been reduced	1
I believe the Callide Dam saved everything downstream from a worse disaster	1
Some trees were washed away	1
Releasing Dam caused floodwaters to peak	1
They should have released the Dam sooner	1

Q26 – Thinking about emergency warnings generally, from any source or organisation, how could they be improved?	
A reply function to say you have received or noticed the message	1
Stop building houses in flood prone areas	1
Maybe letters	1
Be prepared. Get extra food and buy basics	1
We need to do our part as well	1

appendix e – sampling error chart

All sample surveys and polls, whether or not they use probability sampling, are subject to multiple sources of error which are most often not possible to quantify or estimate, including sampling error, coverage error, error associated with non-response, error associated with question wording and response options and post survey weighting and adjustments. Therefore MCR avoids the words “margin of error” as they are not able to be verified. All that can be calculated are different possible sampling errors with different probabilities of pure, unweighted, random samples with 100% response rates. These are only theoretical because no published surveys come close to this ideal. Respondents for this survey were randomly selected (using probability sampling) from the available telephone number database. Because the sample is based on those who agreed to be invited to participate in the online panel, accurate estimates of theoretical sampling cannot be definitively calculated. At the absolute minimum, sampling error based on various cell sizes for this survey could fall within the following ranges.

(at the 95% confidence level)

Sample size	10%/90%	20%/80%	30%/70%	40%/60%	50%/50%
5	±27.0	±36.0	±41.0	±44.0	±45.0
