Queensland University of Technology, Brisbane, Australia

Introduction

Tamborine Mountain is one of populated area in Southern Queensland which recently settled around 8500 residents. It is located on the southern part of the Moreton geological complex (Willmott, 1981) on the southwest of the City of Gold Coast. As a volcanic plateau surrounded by steep slopes, scarps, and benches stretched away from the south to the north (Green, 1964), Tamborine being one of tourism destination in Gold Coast, however, the geological and topography condition support to generate landslide hazards. It was reported a number of **earthslides and rockfalls** wrecked public and private facilities surround the flanks, which are about **5 landslides data recorded** on the **Table 1**. Previous research study about landslide hazards was established as below:

- Willmott (1981) who explained about landslide characteristics and zoning landslide susceptibility based on geology, hydrogeology, and terrain condition.
- Geotechnical study on slope stability was brought by Ali et al (2013);
- Kim et al (2014); and
- Gratchev (2022).

QUT and TMR Queensland has been collaborating to develop **Landslide Early Warning System in Tamborine's critical slopes**, nevertheless, which slopes that categorized as 'critical' or 'susceptible' to landslide is **not defined yet**.

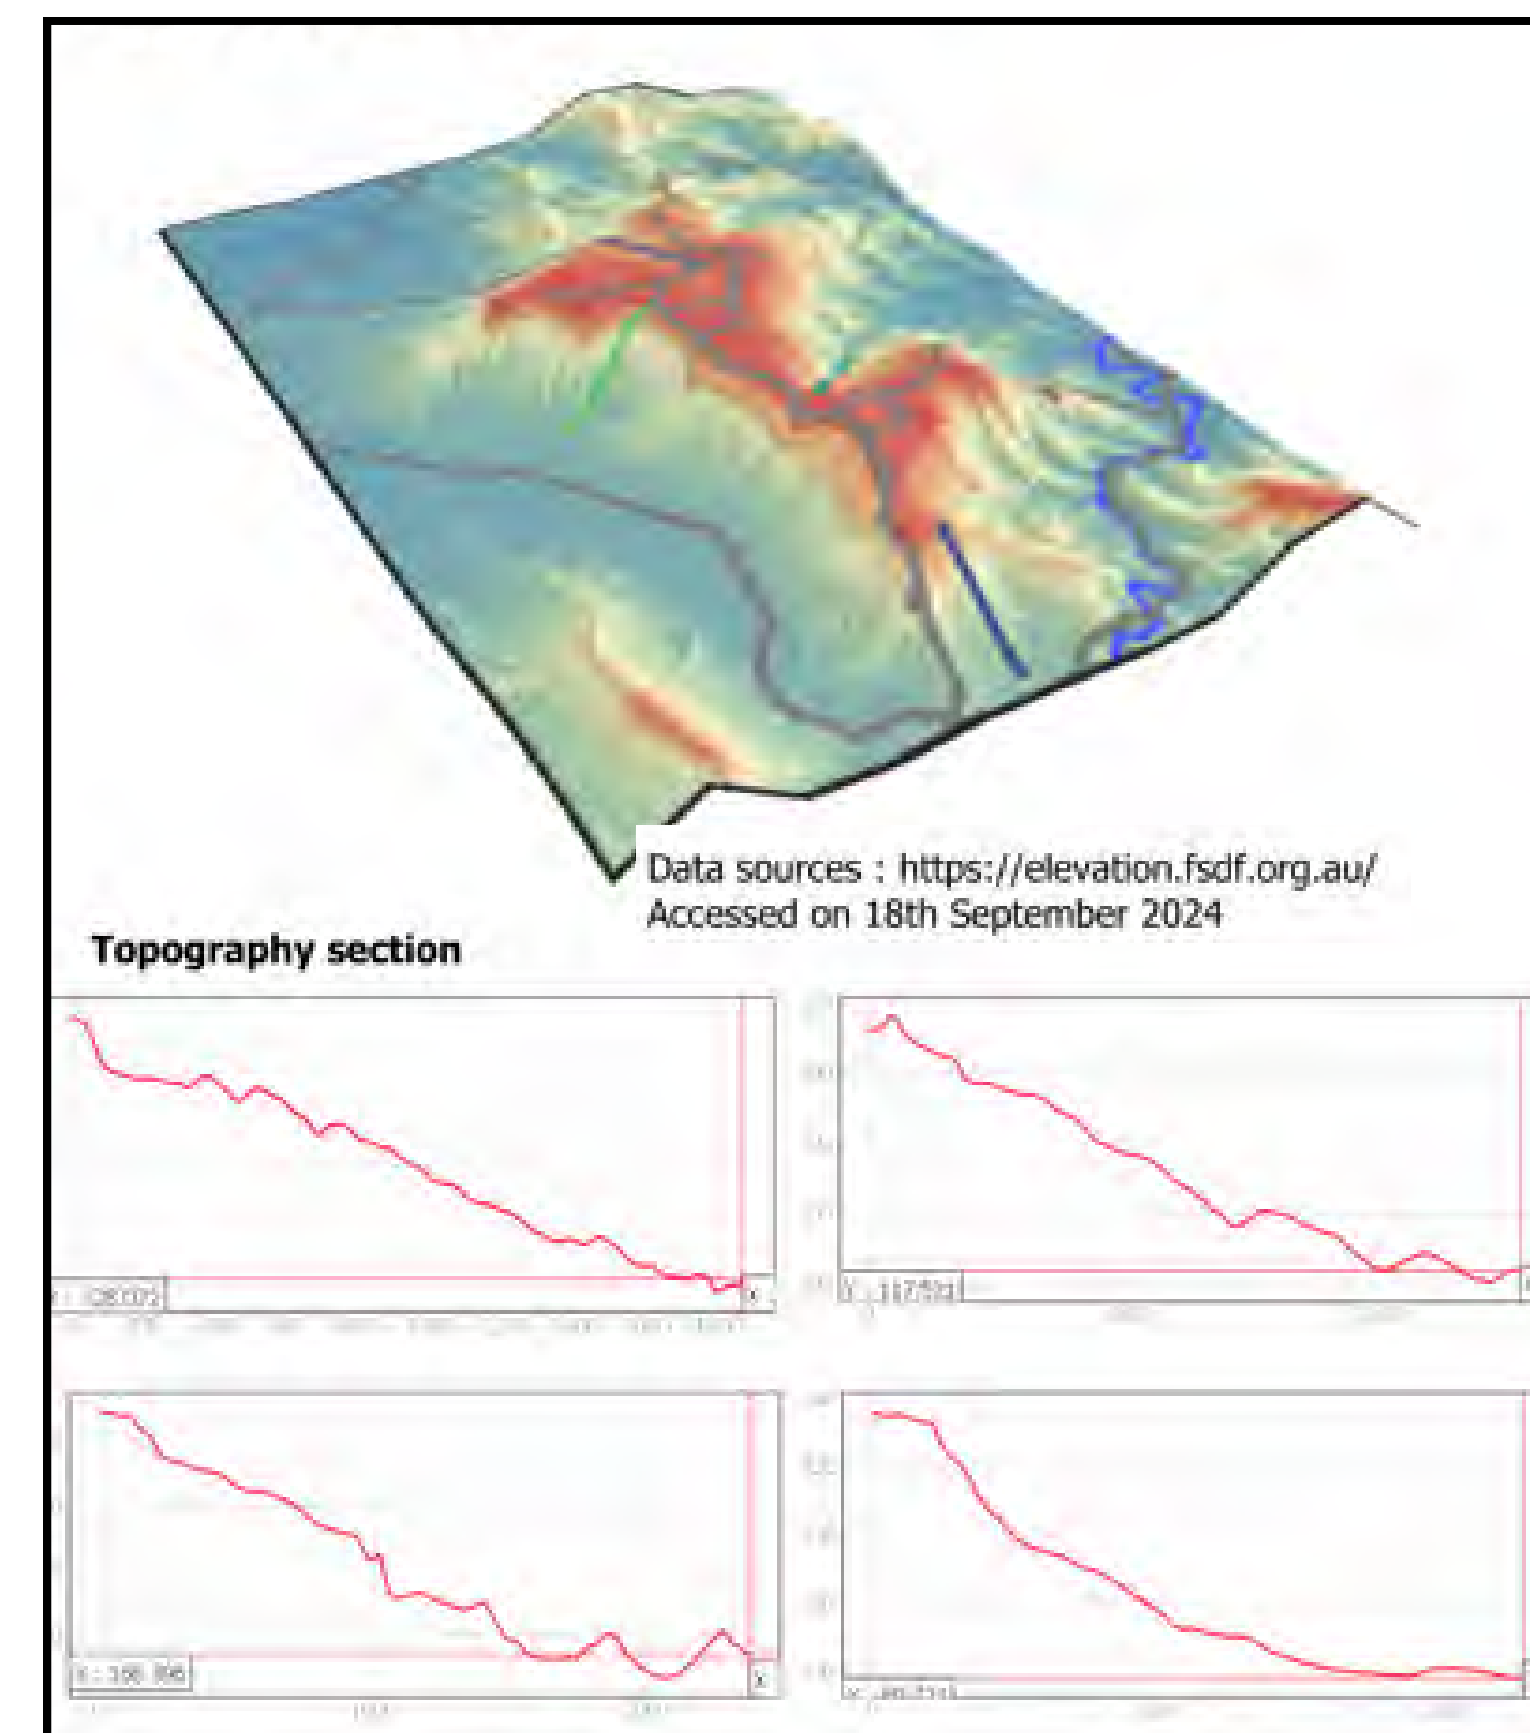

Tamborine Mountain Landslide Data

| Date | Location | X | Y | Landform | Movement type | Causes | Sources |
|------------|--|-----------|------------|-------------------|---------------|--|------------------|
| N/A | Tamborine Mt, at the back of St Bernard Hotel | 518001.34 | 6908322.89 | Escarpment | Rockfall | Surface erosion/ weathering | Willmott (1981) |
| N/A | Tamborine Mountain, 1km to the east of St Bernards Hotel | 518001.35 | 6908322.90 | Escarpment | Rockfall | Surface erosion/ weathering | Willmott (1981) |
| N/A | Tamborine Mountain, on the bench above Camerons Falls | 518001.36 | 6908322.91 | Escarpment | Earthslide | Surface erosion/ weathering | Willmott (1981) |
| 27-01-2013 | The Goat Track (Main Western Road service road, Tamborine Mountain Road), Tamborine Mountain | 516923.49 | 6911315.37 | Constructed slope | Debris | Prolonged high precipitation (Intense short period rainfall) | Media report |
| 00-01-2013 | Henri Robert Drive, Clagiraba, QLD | 522803.65 | 6905813.21 | Open-cut slope | Rockfall | Heavy rainfall | Kim et al (2015) |

Research Question??

"Which areas are most susceptible to landslides and rockfalls?"

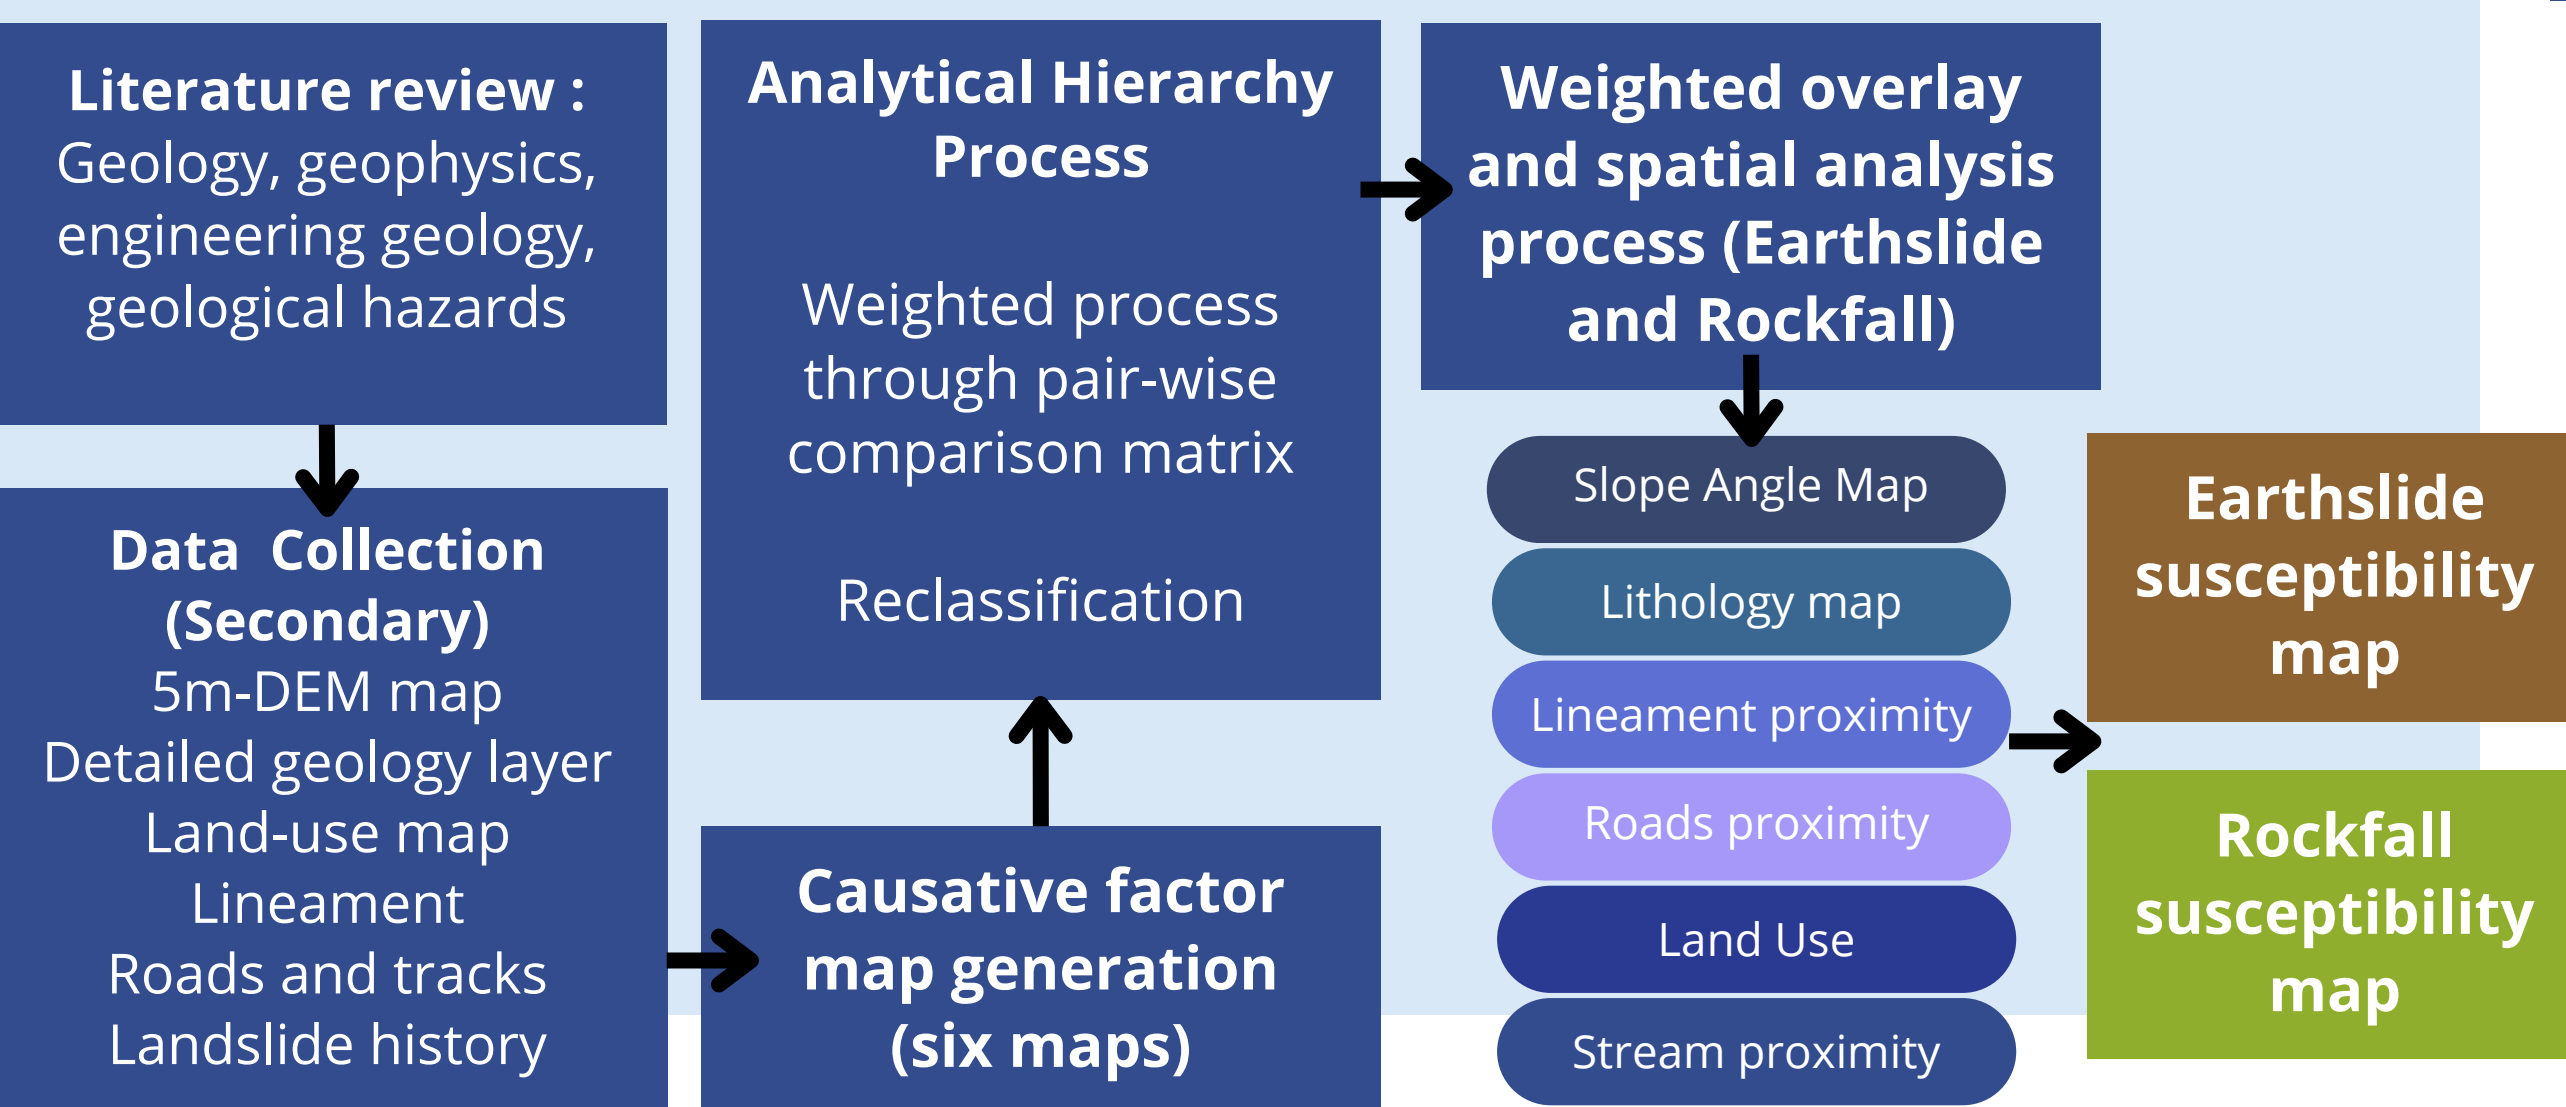

3D Physiography map of Tamborine Mountain

Methods

Due to limited of landslide history data, *data-based driven* decision is not applicable. Therefore, susceptibility mapping was done by a *knowledge-based driven* method. Semi-qualitative decision-making process was applied using **Analytical Hierarchy Process** (Saaty, 1980; Rozos et al., 2011, as cited in Gulbet et al, 2024). It is a heuristical process that combined qualitative judgement of expertise and quantitative. This method **controls the uncertainty** from our judgement through the '**Consistency Ratio**' rule (Soeters et al 1996; Guzetti et al 1999; as cited in Liu, X. et al 2024)

Research Flowchart

AHP Method

Data Aspect and Sources

| Importance scale | Definition |
|------------------|--|
| 1 | Equal importance |
| 3 | Moderate importance |
| 5 | Strong importance |
| 7 | Very strong importance |
| 9 | Extreme importance |
| 2,4,6,8 | Intermediate values between two adjacent decisions |
| Reciprocals | Used for inverse comparison |

| n | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
|----|---|---|------|------|------|------|------|------|------|------|------|
| RI | 0 | 0 | 0.58 | 0.90 | 1.12 | 1.24 | 1.32 | 1.41 | 1.45 | 1.49 | 1.51 |

Data Analysis

Data Aspect and Sources

| Data aspect | Data format | Remarks | Source |
|---------------------|-----------------|--|---|
| Slope angle | Raster | Derived from 5m DEM; divided by degree unit; EPSG:7856 - GDA2020 / MGA zone 56 | Geoscience Australia 2015 |
| Land use | Raster | The most recent mapping of land use features for South East Queensland from 2011, 2012 and 2013; EPSG:7856 - GDA2020 | Department of Environment and Science, Queensland Government 2023 |
| Lithology | Raster | Projected; EPSG:7856 - GDA2020 / MGA zone 56 | Department of Resources Queensland 2023 |
| Lineament Proximity | Raster | Projected; proximity processing derived from EPSG:7856 - GDA2020 / MGA zone 56 | Department of Resources Queensland 2023 |
| Stream proximity | Raster | Projected; proximity processing derived from EPSG:7856 - GDA2020 / MGA zone 56 | Queensland Spatial Catalogue |
| Road Proximity | Raster | Projected; proximity processing derived from EPSG:7856 - GDA2020 / MGA zone 56 | Department of Resources Queensland 2023 |
| Landslide location | Point shapefile | Some points was adjusted referring to Willmott (1981) - EPSG:7856 - GDA2020 | Geoscience Australia (2012); Kim, D.H et al (2015) |

Pair-wise comparison matrix for causative factors

| Criteria | SI | Lt | LP | LU | RP | SP | Weight | CR |

| Ar | 0.33 | 0.33 | 0.50 | 0.50 | 1.00 | | | 0.10 |
| MR | 0.14 | 0.14 | 0.17 | 0.20 | 0.20 | 1.00 | | 0.03 |

CI = Colluvium; AI = Alluvium; BR = Basaltic Rock; CS = Clayey Sedimentary rock; Ar = Arenalite; MR = Metasediment Rock

Pair-wise comparison matrix for land use factor

| Criteria | IU | Wt | PI | PD | PN | CN | Weight | CR |
|----------|------|------|------|------|------|------|--------|------|
| IU | 1.00 | | | | | | | 0.39 |
| Wt | 0.50 | 1.00 | | | | | | 0.24 |
| PI | 0.33 | 0.50 | 1.00 | | | | | 0.16 |
| PD | 0.33 | 0.33 | 0.33 | 1.00 | | | | 0.09 |
| PN | 0.25 | 0.33 | 0.25 | 0.50 | 1.00 | | | 0.07 |
| CN | 0.25 | 0.25 | 0.25 | 0.33 | 0.33 | 1.00 | | 0.05 |

IU = Intensive Uses; Wt = Water; PI = Production from Irrigated Agriculture and Plantations; PD = Production from Dryland Agriculture and plantations; PN = Production from relatively Natural environments; CN =

Pair-wise comparison matrix for roads proximity factor

| Criteria | 0-20m | 20-30m | 30-40m | 40-50m | >50m | Weight | CR |
|----------|-------|--------|--------|--------|------|--------|------|
| 0-20m | 1.00 | | | | | | 0.36 |
| 20-30m | 1.00 | 1.00 | | | | | 0.29 |
| 30-40m | 0.33 | 0.50 | 1.00 | | | | 3.2% |
| 40-50m | 0.33 | 0.50 | 0.50 | 1.00 | | | 0.13 |
| >50m | 0.14 | 0.17 | 0.20 | 0.25 | 1.00 | | 0.04 |

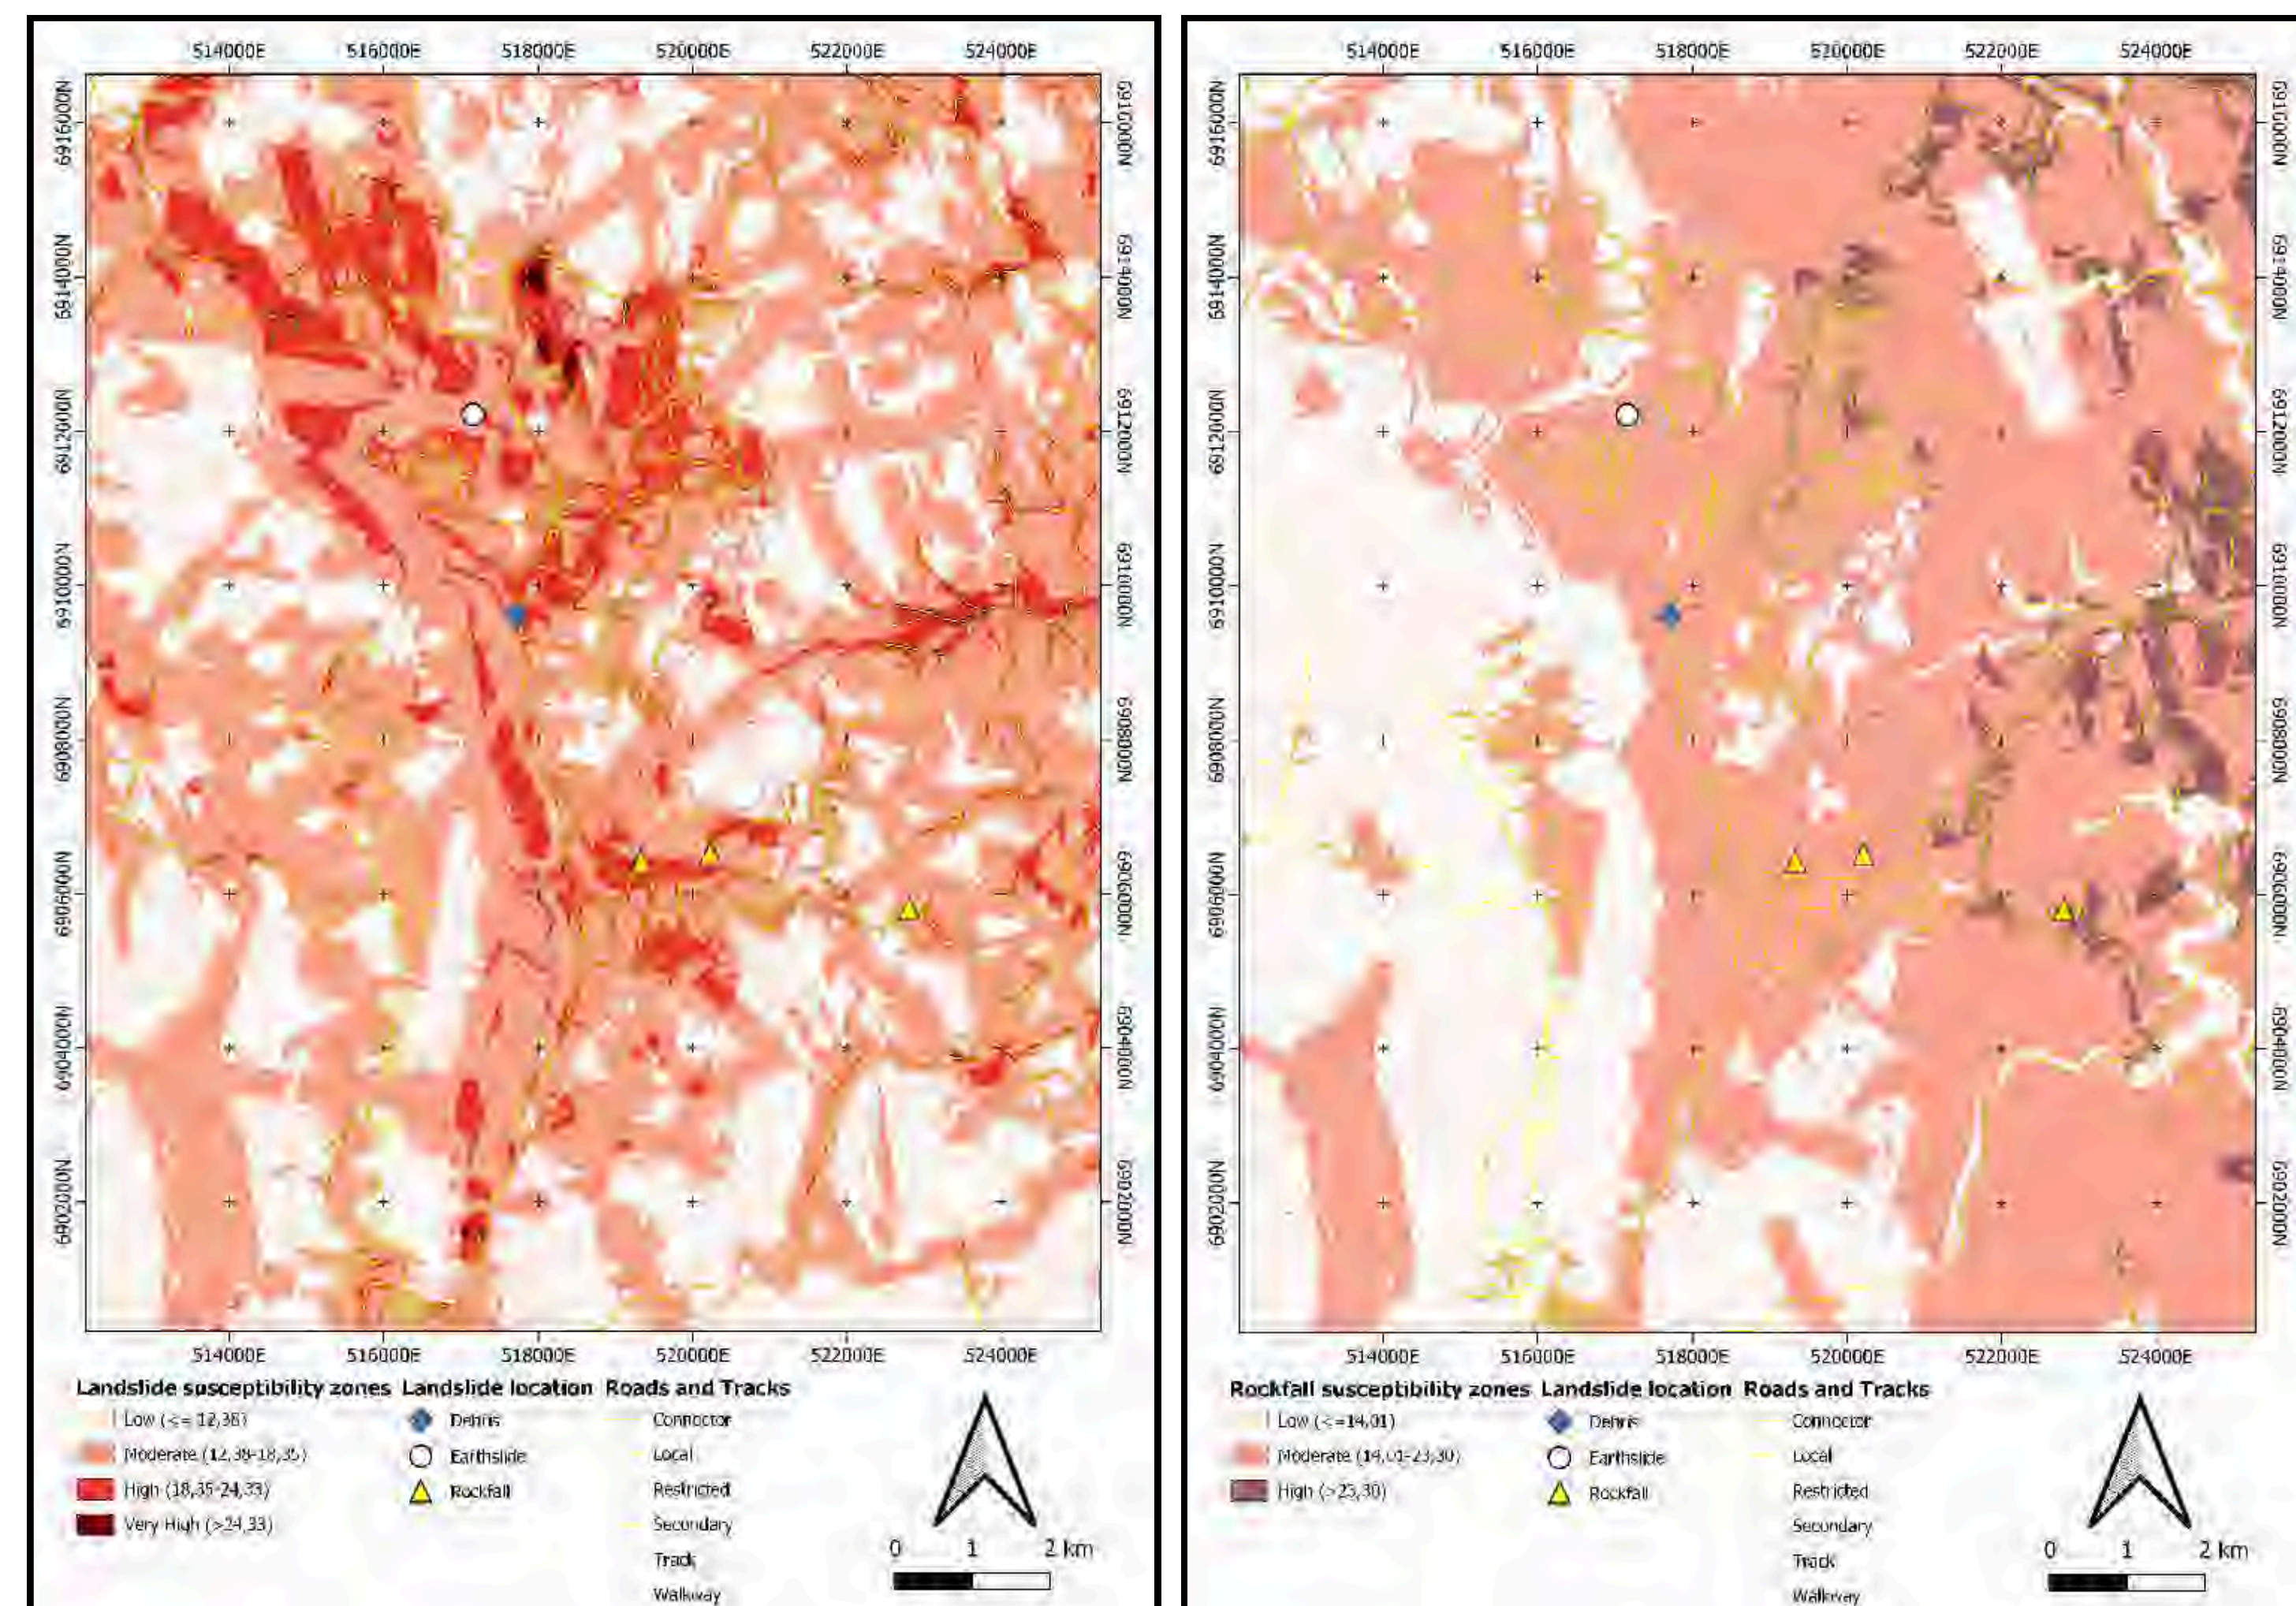

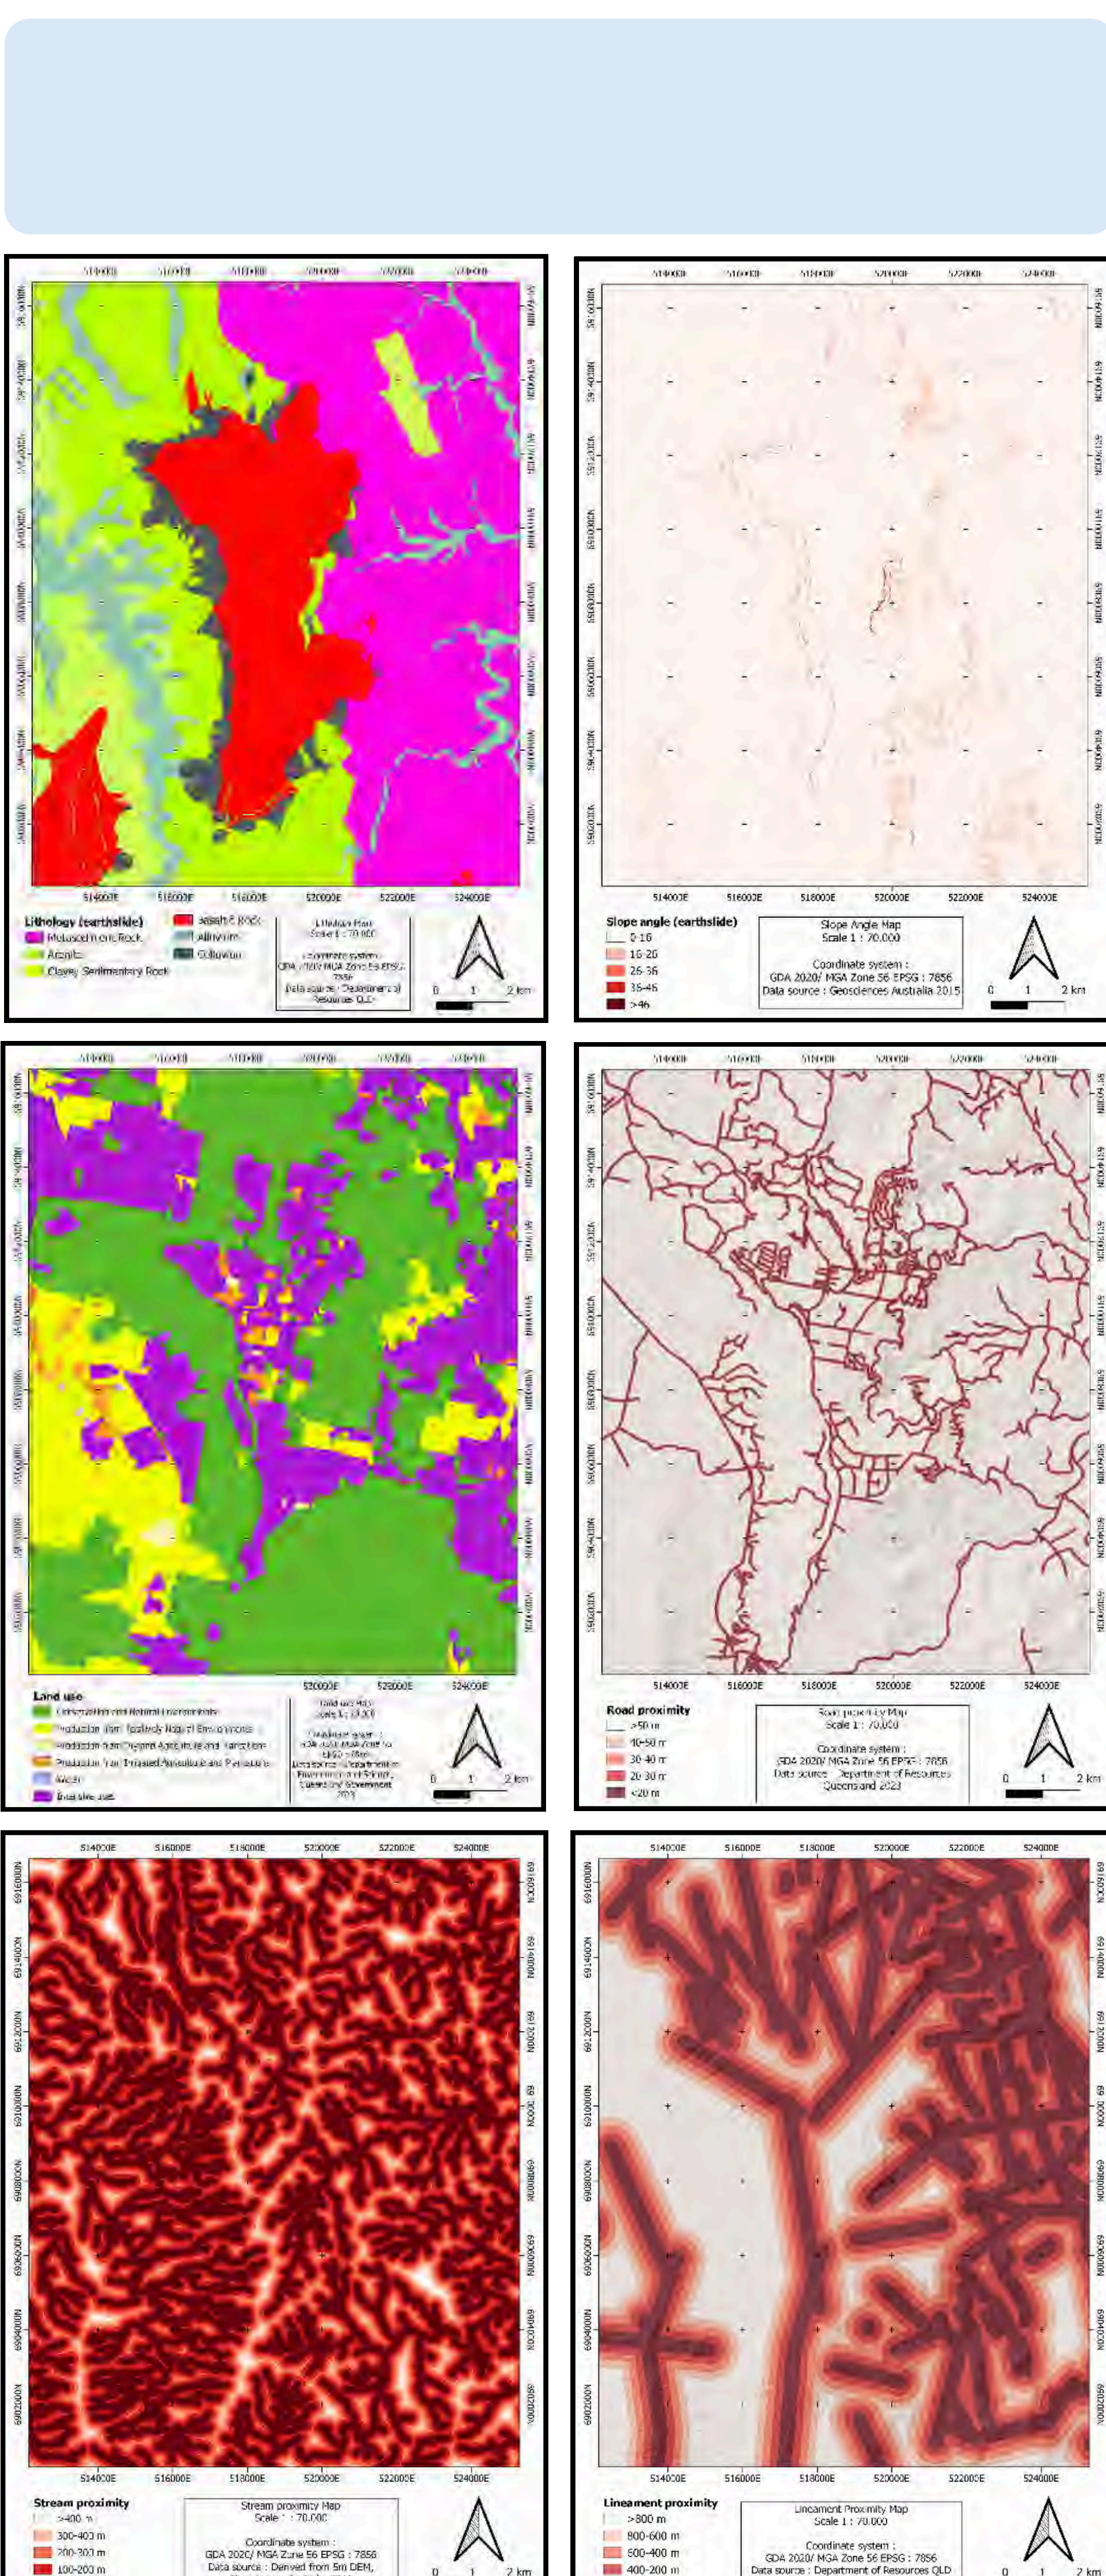

Pair-wise comparison matrix for stream proximity factor

| Criteria | 0-100m | 100-200m | 200-300m | 300-400m | >400m | Weight | CR |
|----------|--------|----------|----------|----------|-------|--------|------|
| 0-100m | 1.00 | | | | | | 0.37 |
| 100-200m | 1.00 | 1.00 | | | | | 0.32 |
| 200-300m | 0.33 | 0.50 | 1.00 | | | | 4.5% |
| 300-400m | 0.20 | 0.25 | 0.33 | 1.00 | | | 0.09 |
| >400m | 0.17 | 0.20 | 0.25 | 0.33 | 1.00 | | 0.05 |

Pair-wise comparison matrix for lineament proximity factor

| Criteria | 0-200 m | 200-400 m | 400-600 m | 600-800 m | >800 m | Weight | CR |
|-----------|---------|-----------|-----------|-----------|--------|--------|------|
| 0-200 m | 1.00 | | | | | | 0.35 |
| 200-400 m | 0.50 | 1.00 | | | | | 0.27 |
| 400-600 m | 0.50 | 0.50 | 1.00 | | | | 3.9% |
| 600-800 m | 0.33 | 0.33 | 0.50 | 1.00 | | | 0.11 |
| >800 m | 0.33 | 0.33 | 0.33 | 0.50 | 1.00 | | 0.08 |

Result and Discussion

| Rockfall Susceptibility Zone | | |
|------------------------------|-------------|----------|
| Class | Areas (Km2) | Rockfall |
| Low | 103,69 | 0% |
| Moderate | 168,26 | 0% |
| High | 4,50 | 100% |

| Earthslide Susceptibility Zone | | |
|--------------------------------|-------------|-----------|
| Class | Areas (Km2) | Earthside |
| Low | 107,46 | 0% |
| Moderate | 147,87 | 0% |
| High | 21,09 | 100% |
| Very High | 0,04 | 0% |
